CHAPTER IV: THE FWB'S DEBT IN THE FRAMEWORK OF THE EUROPEAN CONCEPT OF CONSOLIDATED GROSS DEBT (MAASTRICHT CONCEPT)	82
ANNEX 1	87

Foreword

The Covid-19 pandemic dominated the year 2020. It had major consequences on many sectors, including the public health, social and financial sectors.

The slowdown of the economic activity has had a negative impact on the perceived revenues. Consequently, the public authorities supported the various impacted sectors to survive this unprecedented crisis. The combined effect of the supportive measures and the negative impact on the revenues led to an increase of the public deficit. It is expected that the impacts of this crisis will last beyond 2020.

The Federation Wallonia-Brussels (FWB) has, as such, been impacted by this crisis and saw its financing needs grow from EUR 935 million in 2019 to EUR 2.3 billion in 2020 because of the decrease in economic growth.

For the year 2020, those needs can be decomposed as following: EUR 496 million of long-term loans reaching maturity and EUR 1,794 million linked to the budget deficit.

In order to meet these objectives, the Agency, which is working in close cooperation with the Government, ensures to conduct its actions in line with several guidelines: diversification of funding sources as well as cost control and debt management in a context of low interest rates, despite of the challenging times.

Diversifying funding sources

A total of EUR 1,958 billion has been financed in 2020 through 24 operations, realized under the EMTN format at a fixed rate. One of these has been realized via a “benchmark” type operation (a larger scale and proactive operation towards institutional investors that is issued for at least EUR 500 million) that generated EUR 600 million. It is the first “benchmark” launched by the Agency since the beginning of the legislature. The number of received quotes confirmed the attractiveness of the Federation towards investors.

Controlling financing costs and managing debt

The current climate of low, and even negative, rates, challenged the strategy of the FWB regarding its principle to maintain the variable-rate portion of its debt below 15%. The fixed-rate portion of the ratio fixed rate / floating rate debt stood at 88.7% at the end of 2020.

The FWB has been able to take advantage of the low interest rate climate by favouring long-term loans. For the financing operations of 2020, the weighted average maturity stands at 11.85 years and the weighted average rate at 0.145%. The benchmark operation has a weighted average rate of -0.196% and a maturity of 8.5 years.

The Federation Wallonia-Brussels pays attention as to maintain a sufficiently high duration for its long-term indebtedness to allow a spreading of its debt over a sufficiently large period. However, the FWB also ensures to diversify its debt maturities to avoid refinancing peaks and troughs.

Adjustment to the crisis

The Treasury community Council, which advises the Minister of the Budget in its debt management, proposed in December 2020 a review of the principal 1-year and 5-year refinancing ratios. After this review, the part of the debt coming to maturity within the year cannot exceed 10% of the total debt, while the one coming to maturity within the next 5 years is limited to 33.3%. When it comes to the risk ratios, the 1-year refinancing risk stood at 5.5% in 2020, while the 5-year refinancing risk stood at 19.2%.

These adjustments aim to consider the consequences of the crisis on the refinancing strategy. The reactivity and the unanimously recognized expertise of the Agency allow the FWB to safely refinance its policies at the lowest cost possible for the French-speaking community.

This report offers a detailed explanation of the strategy led by the Agency and its team in collaboration with the Government. The report is in line with the FWB's willingness towards a transparent debt management, in order to notably respond to the trust granted by the investors. The current economic context confronts us more than ever to deliver the required transparency and to optimise our debt management. I will work on this on a daily basis with the support of the Agency and its teams.

The Minister of the Budget
Frédéric Daerden

The key figures of the Federation Wallonia-Brussels

Amounts in € million as at 31 December	2019	2020
Stock of debt of the Community		
Total community consolidated debt	6,797.3	8,565.2
Long-term community debt	7,249.8	8,737.1
- Direct debt	7,238.5	8,726.7
- University debt	11.2	10.4
Short-term community debt	-323.8	-171.9
Community debt held by the Fonds Ecureuil	128.6	0 ¹
Direct debt amortisations	610.5	494.8
Re-borrowing of total debt amortisations	611.4	495.6
New borrowings	481.2	1,488.2
Debt instruments used		
Long-term EMTN Financing programme	5,056.0	6,383.4
Bank loans	610.9 ²	592.9
Schuldschein	1,507.8	1,510.8
OLCo, Lobo,...	75.0	75.0
Commercial paper & short-term EMTN	0.0	175.0
Characteristics of the debt of the Federation Wallonia-Brussels		
Financial rating awarded by rating agency Moody's (last update: 10 December 2020)		
- Long terme	Aa3	A1
- Outlook	Negative ³	Negative
- Currency	Aa3	A1
- Short-term	P-1	P-1
Extra-financial rating awarded by agency Vigeo Eiris	"Robuste" 57%	"Robuste" 57%
Distribution according to the rate (in %)		
- Fixed rate	87.5	88.7
- Floating rate	12.5	11.3
Residual maturity in terms of liquidity (in years)	17.4	16.6
Internal rate of return (in %)	2.3	1.9
Debt/revenue ratio (in %)	65.2	88.4
Debt service/revenue ratio (in %)	1.6	1.7

1 In 2020, the Fonds Ecureuil has been included in the treasury of the Minister

2 Including EIB loan of €170.0 million and ECB loan of €150.0 million.

3 Negative outlook was assigned on 05/06/2020.

Introduction

In the tradition of the reports presented by the Federation Wallonia-Brussels since the beginning of the 1990s, this report relating to the 2020 figures presents in detailed fashion the information concerning solely the debt that the Federation has directly contracted or taken over, i.e. that issued and managed directly by the administrative departments of the FWB Ministry, for which it is responsible, and for which the interest charges are charged to the FWB's expense budget.

Out of a concern for clarity and transparency and with the aim of giving the reader comprehensive information, the debt issued by entities other than the FWB, debt for which it is not responsible but which nonetheless fits into the European concept of consolidated gross debt (Maastricht concept) falling within the FWB's consolidation sphere, is covered in this report. However, this will be presented in summary form, since it is from the legal entity responsible for this debt, the one that issues, manages and repays it, that the reader interested by the data set forth should be able to obtain the information he requires.

Chapter I

Institutional framework of the Federation Wallonia-Brussels (French Community of Belgium)

Since June 2011, in accordance with the Government and Parliament decision in this respect, all everyday notifications and announcements are made using the official name of Federation Wallonia-Brussels (*Fédération Wallonie-Bruxelles*). Seeing as the Constitution has not been amended, texts of a legal import or significance¹ still make reference to the name “French Community” (*Communauté française*). In this report we will also more often than not use the name Federation Wallonia-Brussels and its acronym FWB. However, the name has not been changed in the extracts of articles of law cited in this report.

A. Belgium: a federal state

In 1993, Belgium officially became a federal state made up of two types of federated entity: the Regions and the Communities (Belgian Constitution² – Article 1). The country currently has three Regions (the Walloon Region, Flemish Region and Brussels-Capital Region) and three Communities (the French Community, Flemish Community and German-speaking Community). With the exception of Flanders, which has merged its Regional and Community components into a single body, each federated entity has the sovereign power to exercise its powers and remit by means of its own parliamentary and governmental institutions.

B. Explanation of the concept of Community

The Communities group people together according to the criteria of language and culture. Each Community’s field of action is defined according to four linguistic regions: the “French-language region”, the “Dutch-language region”, the “Brussels-Capital bilingual region” and the “German-language region” (Constitution – Article 4). The linguistic regions are mere territorial subdivisions that do not have any political or administrative body and therefore should not be confused with the three major Regions (Walloon, Brussels and Flemish Regions) (Constitution – Article 3). Given the bilingual (French/Dutch) character of the Brussels-Capital linguistic region, the country’s two main Communities (French and Flemish) are authorised to exercise their powers there within the bounds of their remit. However, seeing as the absence of an official linguistic census makes it impossible to differentiate people in this respect, the two Communities’ scope of competence here has been limited to those institutions that have opted for adherence to one of the two languages. This specific characteristic implies that the Communities are human entities and not territorial entities in the traditional sense of the term. The Regions, for their part, are territorial entities in their own right, and exercise their competencies in matters completely different to those of the Communities.

This two-tier federalism is the result of the historical evolution of the reform of the Belgian state.

1 These are chiefly texts of a prescriptive nature such as draft decrees and draft orders of the Government of the French Community; agreements, contracts of employment, lease contracts, loan agreements or contracts for the placing of items at a person’s disposal, etc.; documents relating to a procurement contract, etc.

2 Constitution coordinated on 17 February 1994.

C. The Federation Wallonia-Brussels (French Community): “geographical” organisation, institutions, new designation, responsibilities and financing

C.1. “Geographical” organisation

The Federation Wallonia-Brussels (French Community) is a federated entity of the Belgian federal state. Its legal existence is ensured by Articles one and two of the Constitution.

Its powers are exercised with regard to the people established on the territory of the “French-language region” (Wallonia, with the exception of people living in the German-speaking Community) and the unilingual French-speaking institutions of the “Brussels-Capital bilingual region”.

C.2. Institutions

The institutional organisation of the federated entities is defined by the Special Institutional Reform Act (“LSRI”) of 8 August 1980, as amended.

The Parliament³ of the French Community (or Parliament of the Federation Wallonia-Brussels) is a unicameral assembly bringing together 94 indirectly elected members: the 75 Walloon regional deputies and 19 Brussels French-speaking regional deputies. It exercises legislative power by means of decrees and in particular holds the vote on the budget and carries out the closing of the accounts.

At this very moment, the Government of the Federation Wallonia-Brussels has 5 members⁴ and is represented since the regional and European elections of 26 May 2019, by a coalition of the PS (Socialist Party), MR (Mouvement Réformateur) and Ecolo, which accounts for 71.3% of the seats in the Federation’s Parliament. With the responsibility for exercising executive power, the Government provides *inter alia* for enforcement of the decrees voted by the Parliament by means of orders. The Government is politically accountable to Parliament.

It should be noted that the result of the federal and European elections does not have any direct impact on the Community’s political landscape and thus, inevitably, on the Community parliamentary and governmental representations. In this way the Government of the FWB may be of a different coalition to that of the federal government or the regional governments. As such, although a PS/MR/Ecolo coalition was also set up in Wallonia on 17 September 2019, it was another majority which was constituted a few weeks earlier in the Brussels-Capital Region bringing together, on the French-speaking executive side, the PS, Ecolo and DéFI (Independent Federal Democrat).

³ Name permanently sanctioned by the review of the Constitution of 25 February 2005 modifying the terminology of the Constitution (entering into force on 11 March 2005). The official name had previously been “Council of the French Community”.

⁴ See in this respect the French Community Government order of 17 September 2019 establishing the distribution of powers among ministers and regulating the signing of the Government’s proceedings (Belgian Official Journal of 27/09/2019)

C.3. New designation: the Federation Wallonia-Brussels

The “French-language cultural Community” is the name that the Constitution gave in 1970 to the federated political grouping made up of Walloons and French-speaking Brussels residents together. The constitutional review of 1980 changed this name to “French Community”. Other names have been suggested over time. Further to a resolution of 25 May 2011, the Parliament of the French Community decided to systematically use the name “Federation Wallonia-Brussels” to commonly refer to the French Community in its announcements and notifications. The Government is doing likewise. The term “Federation Wallonia-Brussels” is thus used to denote the French Community referred to in Article 2 of the Constitution.

C.4. Responsibilities

The powers and areas of competence of the Federation Wallonia-Brussels are determined by the Belgian Constitution and by the LSRI (Special Institutional Reform Act) of 8 August 1980, as amended. The subjects for which it has competence can be broken down into four aggregates:

- culture (fine arts, performing arts, radio and television, and sport);
- education (from nursery school to higher education);
- social affairs (assistance for young people, infancy, health promotion, social assistance for prisoners);
- the use of languages (in administrative and social matters)⁵.

For the various matters for which it is responsible, the Federation is also competent in the field of national and international cooperation as well as in that of scientific research.

In 1993 the FWB transferred the exercising of some of its powers to the Walloon Region and to the French Community Commission of the Brussels-Capital Region (Cocof). This transfer mainly concerned school buildings, sports infrastructures, tourism, vocational training, social advancement and the policies on health and assistance to people.

The year 2013 also saw an important reform of the Belgian State. The federated entities received new areas of competence for an overall amount estimated in 2015 at some €20.0 billion. A significant part of the exercising of the powers received by the FWB was immediately transferred by decree, in the framework of an intra-Francophone agreement, to the Walloon Region and the Cocof, so that ultimately the FWB's new powers following the sixth State reform are basically limited to legal advice centres (*Maisons de Justice*) and some of the health prevention activities⁶.

5 For more details, see the chapter “Economic and Financial Report” of the 2019 General Report available on the Ministry of the French Community’s budget website at: <http://www.budget-finances.cfwb.be>.

6 See in this respect the Special Sixth State reform Act of 6 January 2014, and the special decree of 3 April 2014 on the French Community’s powers the exercising of which is transferred to the Walloon Region and the French Community Commission (the so-called “Sainte-Emilie” decree), which can be consulted on the website of the Parliament of the Federation Wallonia-Brussels at: <http://www.pfwb.be> and/or on the website of the Belgian Official Journal: <http://www.ejustice.just.fgov.be>.

C.5. Financing

The financing of the federated entities (Communities and Regions) is governed by the Special Act of 16 January 1989 on the Financing of the Communities and Regions (LSF), as amended in 1993, 2001 and 2014.

The year 2001 was particularly marked by a major reform of the financing method of the Wallonia-Brussels Federation: see the special law of 13 July 2001 on the refinancing of Communities and on the extension of the tax powers of Regions. In addition, the so-called VAT endowment, already indexed to inflation, has also been linked to economic growth.

In January 2014 the LSF was adapted following the implementation of the sixth reform of the Belgian state: see on this subject in particular the Special Act of 6 January 2014 on reform of the financing of the Communities and Regions, extension of the fiscal autonomy of the Regions and financing of the new powers (Belgian Official Journal of 31 January 2014). The mechanisms set forth in the new version of the LSF entered into force on 1 January 2015.

What is expounded below therefore relates to the LSF as amended in 2014.

In its Article 1, the Special Act establishes that the financing of the budget of the French Community of Belgium and the Flemish Community comes from:

- non-tax revenues;
- revenues from taxes and perceptions;
- federal allocations;
- a transition mechanism (applicable for the period 2015-2033);
- loans.

The French Community of Belgium has consequently 4 different sources of financing (transition mechanism excluded).

Non-tax revenues are various receipts stemming, for example, from various registration fees, income from sale of common property, diploma equivalence fees, etc.

Tax revenues collected through VAT (value-added tax) and personal income tax which are transferred from the federal government, in accordance with LSF, independently of the FWB's actual contribution of these taxes.

Besides, this new level of allocations from VAT revenues is increased as from 2015 with:

- the amount of the compensatory allocation from the Radio and Television Licence Fee (RRTV); and
- the financing means linked the transfer of competences organized by the sixth State reform: the « Fonds pour les équipements et services collectifs (FESC) », « la protection de la jeunesse », the « Fonds d'impulsion fédérale à la politique des immigrés (FIPI) » and the « Fonds européen d'intégration (FEI) », the global projects and projects for young starters, and career break.

In 2014 an overall review of the LSF took place. However, the modifications made to the LSF were negotiated in such a way that when they entered into force in 2015, for the financing of its traditional powers, the FWB's revenues were identical to those resulting from the LSF prior to its review. Nonetheless, it should be stated that efforts to stabilise public finances are expected on the part of the FWB, as well as all the entities of the federal Belgian state, and are included in the LSF. This stabilisation effort will be applied after a calculation has been made of the balance between the old and new Act. It should also be noted that the revenues that the FWB receives for the powers concerning "family income support, care for the elderly" and (in part)

for powers in the “health” area are immediately transferred, either to the Walloon Region or to the Cocof, which (will) actually exercise these powers in application of the Sainte-Emilie agreements. Indeed, following the sixth State reform, the Sainte-Emilie Decree establishes that an additional allocation should be granted by the FWB to the Walloon Region and to the Cocof on annual basis ; this allocation is calculated in such a way that the operation is totally neutral from the FWB perspective. Nevertheless, the Sainte-Emilie decree foresees explicitly that the Walloon Region and the Cocof take part in the efforts to stabilize public finances, as required by the sixth State reform, and as translated in the calculation of the LSF cash flows for the FWB. The additional allocation is mentioned in a specific section of the budget and corresponds to a large extent to the allocations “new competences transferred” for an amount of €3,488 million in 2020. Consequently, the budget of the FWB is not modified by in- and out-flows, which compensate perfectly. The Sainte-Emilie allocations have evolved as follows since 2015, based on the respective adjusted budgets:

Year	2016	2017	2018	2019	2020
Sainte-Émilie	3,420,381,000	3,509,642,000	3,574,125,000	3,649,476,000	3,488,828,000

The Sainte-Emilie allocation (2014 agreement) should be distinguished from the Saint-Quentin Decree II (1993 agreement), which is maintained in chapter 5 of FWB's expenses budget (just over €479.0 million in 2020). Lastly, on the basis of successive adjusted budgets, the following table can be drawn up:

Year	2016	2017	2018	2019	2020
Saint-Quentin	452,925,000	467,160,000	467,241,000	476,742,000	479,187,000

D. Rules governing indebtedness of the federated entities

D.1. Legal foundations

Pursuant to Article 49, § 1 of the LSF of 16 January 1989, the Communities and Regions may contract loans. These loans do not immediately benefit from the federal State's guarantee in application of Article 15 of the LSRI of 8 August 1980.

It should be noted, however, that Article 54 of the LSF states, in § 2, that if the federal State is late in paying or only partly pays the allocations it is bound to transfer to the federated entities in implementation of the LSF, the Federation has the right to contract a loan benefiting *ipso jure* from the guarantee of the State and thus the financial servicing is fully and directly borne by the latter.

Through certain provisions of the LSF, the federal authorities have made sure that the borrowing capacity of the federated entities is restricted. Two objectives are pursued in this area: on the one hand, the safeguarding of economic union and the monetary unit (both at European and domestic level), and on the other hand the prevention of a structural deterioration of borrowing requirements (Article 49, § 6). To this end,

a section entitled “Public Authority Borrowing Requirements” has been created within the High Council of Finance (CSF). This body is made up of representatives of the federal and federated entities. It is responsible for publishing opinions on their borrowing requirements and on the way in which they attained the previous debt standard in the past, or, since 2003, have respected the cooperation agreements entered into between the different regional and Community entities and the federal State; cooperation agreements defining the respective budgetary objectives. It is worth pointing out that the opinions and recommendations published every year by the CSF have had a major influence on the federated entities’ debt policy.

D.2. Types of loans

The Special Act of 13 July 2001 on the refinancing of the Communities and Regions also substantially modified the terms and conditions under which the latter can have recourse to loans. Article 49 of the LSF henceforth stipulates the following:

“§1. The Communities and Regions may contract loans in euros or foreign currencies”.

“§ 2. The programming of public loans [in the strict sense]⁷ is fixed by the [federal] Council of Ministers after consultation with the [Community and Regional] Governments. The terms and issue schedule of any public loan are submitted for approval to the [federal] Minister of Finance. Should the [federal] Minister of Finance refuse to give his approval, the [Community or regional] government concerned may request that the matter be brought before the [federal] Council of Ministers for a decision.”

“§ 3. The Communities and Regions may issue private loans and short-term securities after having informed the [federal] Minister of Finance of this [...]”

The date for entry into force of these provisions was set at 1 January 2002. This means that as from that date, only one procedure involving notification of the federal minister has to be observed before recourse to the loan. The terms and conditions of the notification and the content of this information (in particular the amount and term of the loan, financial conditions, contracting party) have been the subject of an agreement⁸ between the [federal] Minister of Finance and the Community and Regional Governments.

Only loans to be contracted with private individuals are thus subject to approval by the federal Minister of Finance. In respect of all other loans, all that is needed is a simple notification. The Federation Wallonia-Brussels has hitherto never had recourse to financing from private individuals.

It should also be pointed out that the repeal of the former § 4 of Article 49 of the LSF has removed any allusion to the limitation of the French Community’s sphere of borrowing both to the former Belgian franc zone and to the current euro zone.

7 I.e. loans aimed at private individuals.

8 Agreement of 29 April 1991 on Article 49 of the LSF.

Chapter II

Administrative and
technical framework
of the management of
the community debt
and cash balances

A. Administrative framework

The finances of the Federation Wallonia-Brussels are managed by the Community Minister responsible for the Budget and Finance.

Pursuant to Article 3 of the decree containing the Community's Revenue Budget, the Minister is authorised to subscribe loans and to enter into any financial- and treasury management operation undertaken in the Treasury's general interest. This authorisation is thus renewed every year and is also subject to procedures adopted by the Government.

Ministerial orders relating to management of the Community's debt and cash balances are enforced within the Administration by the Debt Agency; the latter is nonetheless responsible for the everyday aspects of this management¹.

The Debt Agency's activities are divided into two distinct bodies; the Front Office and the Back/Middle Office. Whilst the former concludes financial operations on the monetary and financial markets, the latter takes care of administrative, budgetary and accounting control, as well as the production of various reports. For all these matters, the Debt Agency is assisted by a consulting firm which, on request, issues an opinion as to the operations managed and the financial strategy to be pursued.

The activities of the FWB's Debt Agency are subject to various audits and checks, both internal and external to the Administration. Basically there are three such audits: the Tax Inspectorate, the State Audit Office, and the prudential examination carried out by a company auditor approved by the FSMA (Financial Services and Markets Authority).

With a view to optimise the management of Regional and Community finances, organisational synergies were set up between Wallonia and the Federation Wallonia-Brussels, in particular through the creation of a Joint Treasury Council² which can debate on the main orientations taken for the management of the debt and treasury, the coordination of the Community and regional financing policies, the establishment of the joint principles governing financial risk management, and the intensification of synergies in the light of the institutional frameworks. This advisory body is chaired by a representative chosen by joint agreement by the Community and Regional Ministers responsible for the Budget and Finance, and is made up of the representatives of the Ministers-President, of the Vice-Presidents and of the Regional and Community Administrations. The Tax Inspectorate, State Audit Office, company auditors and external experts also take part in the Council's meetings. The Joint Council sets up a Community Treasury Council and a Regional Treasury Council, which are responsible for assisting their respective governments in the daily management of the debt and treasury, making proposals and following-up on the implementation of the strategic decisions taken by the Minister in charge.

1 See on this subject the French Community Government decree of 19 January 2009 on delegations of competencies and powers to sign to general civil servants and to certain officials of the departments of the French Community Government – Ministry of the French Community – General Finance Department – Debt Management Department (former name of the current Debt Agency).

2 Cooperation Agreement of 10 December 2004 establishing a Joint Treasury Council for the Walloon Region and the French Community (MB as at 23 March 2005). Cooperation Agreement of 19 May 2010 modifying the Cooperation Agreement of 10 December 2004 (not published in the MB).

Since the start of the 2014-2019 legislature, the Community Treasury Council has met on several occasions. During these meetings, the strategic orientations for the management of the FWB's debt and treasury are debated and proposals are submitted for approval to the Minister of Budget.

B. Technical framework

The Debt Agency has high-performance IT tools with which to carry out its duties. The Front Office is fitted out, among other things, with a software package enabling it to revalue the main financial instruments held or issued by the Federation Wallonia-Brussels, at any time and in real time. The Back/Middle Office has various IT media and software packages aimed at saving all the operations transacted and producing semi-automated reports. A public contract launched before the summer of 2018 enabled the Debt Agency to replace its old system with a new financial management system that will support decision making, management of the treasury and debt operations of the Agency, helping them to better understand the financial needs of the FWB and its exposure to market risk.

The organisational and administrative procedures for debt- and treasury management within the Debt Agency are in line with best practices identified in entities with similar activities at an international level, and even ahead of public-sector entities. For example, the practice of competitive bidding, verification of market data and independent product valuation is in line with best practices; financing products and hedging instruments used represent a mix of diversified products in line with the benchmark of good practices; the processes used for confirmation processing and marking operations are in line with best practices in treasury management; the processes in place respect the principle of separation of functions; physical access security is in line with best practices, etc.

In their report of July 2019, the auditors responsible for the prudential supervision report that "the tools and procedures set in place by the Debt Agency allow to assess and to manage the risks³ inherent in the debt- and treasury management of the Federation Wallonia-Brussels. These tools and procedures lead to the publication of reports that accurately reflect the actions taken and the situation of the Federation's treasury- and debt position".

In the decree of the 20 December 2011, the Parliament of the French Community adopted the rules of the new public accounting as defined in the 16 May 2003 general provision law. These rules provide the keeping of general accounts according to the usual rules of double-entry bookkeeping, to which the budgetary accounts are integrated. The law also provides that the certification of the general account of the French Community by the Court of Auditors must take place at the latest for the accounts of the financial year 2020.

3 The four essential risks identified by the auditors being:

- the interest rate risk and more particularly the risk of interest rate curves;
- the operational risk;
- the liquidity risk;
- the counterparty risk.

In order to respond to these obligations, the Administration of the French Community started in 2017 to establish a large-scale project, called “programme WBFIn”, that aims to implement the dispositions of the new public accounting thanks to an ERP system. Consequently, the accounting system Gcom has become obsolete and has been replaced by the SAP software. This software allows to respond to the needs of integration of the budget accounting of the entities making up the perimeter of the French Community.

Therefore, all the operations of the Agency are treated according to the established procedures for the double-entry bookkeeping.

The first annual double-entry accounts, related to the financial year 2020, were filled on the 30 June 2021 to get a Certification by the Court of Auditors.

Chapter III

Community cash balances and debt

A. General Presentation

A.1. Component elements of the Community debt as at 31 December: evolution from 2016 to 2020¹.

The various components of the Community debt closed on 31 December in the years 2016 to 2020 have evolved as follows:

Amounts in millions of €	2016	2017	2018	2019	2020
Direct debt [1]	6,119.0	6,394.0	6,756.5	7,238.5	8,726.7
University debt [2]	14.1	12.9	12.1	11.2	10.4
Long-term debt [3] = [1] + [2]	6,133.1	6,407.0	6,768.6	7,249.8	8,737.1
Issues(+)/Current cash investments (-) [4]		-267.0	-393.8	-319.4	0
Debit (+)/Current account credit (-) [5]	-367.3	-30.5	18.3	-4.5	-171.9
Total short-term debt [6] = [4] + [5]	-367.3	-297.5	-375.5	-323.8	-171.9
Total debt of <i>Fonds Ecureuil</i> (7) = (3) + (6)	5,765.8	6,109.5	6,393.0	6,926.0	8,565.2
Debt held by the <i>Fonds Ecureuil</i> [8]	128.5	128.6	128.6	128.6	0
Total debt incl. <i>Fonds Ecureuil</i> [9] = [7] - [8]	5,637.3	5,980.9	6,264.4	6,797.3	8,565.2

From the early 2000s up to 2008, the Community debt had been stabilised in nominal terms to about €3 billion and reduced in relative terms, particularly in terms of revenues. Following the very serious banking and financial crisis of the years 2007/2008 and the Euro crisis of 2011, the Community debt increased significantly and reached €5,333.3 million on 31 December 2015. In 2016, 2017, 2018, 2019 and 2020 the consolidated Community debt increased by an additional €304.0 million, €343.6 million, €283.5 million, €532.9 million, €1,811.3 million, respectively, to €5,637.3 million at year-end 2016, €5,980.9 million at year-end 2017, €6,264.4 million at year-end 2018, €6,797.3 million at year-end 2019, and € 8,565.2 million at year-end 2020.

In 2018, in order to take advantage of the low level of long-term rates and secure the debt against its refinancing risk, the total amount issued over the long-term amounted to €1,392.1 million, including €463.6 million in short-term lines converted into loans with long maturities.

¹ The figures contained in this report are as a rule expressed in € millions; seeing as the underlying calculations were more often than not done to the nearest cent, a difference owing to automatic rounding up or down may appear between a total and the sum of the component parts that make it up.

As the probable cash balance at December 31st 2018 was estimated to be largely creditworthy, an investment of €518.0 million could be realised with the Federal treasury under the consolidation framework, which benefits also the Kingdom in view of its indebtedness. The same operation was carried out at the end of 2019, with an investment of €448 million. The amount included in item (4) in the table above includes an issue of €128.6 million made to the Fonds Écureuil.

If we take into account depreciation for the year (t+1) into the short-term debt in the strict sense as at 31/12/tt, the Short-Term Debt/Total Consolidated Debt ratio can be presented as follows:

Year	2015	2016	2017	2018	2019	2020
Ratio	11.8%	5.5%	12.4%	3.8%	3.6%	7.6%

The 2020 ratio is effectively an estimation at the time of publishing this document, the redemptions which will take place during 2021 are not yet known, since some borrowings are callable and others can potentially be prepaid.

“Non-merger” current accounts with the cashier are presented separately since they are not included in the scale merger of the accounts, represented in line [5] or [6] of the table above in function of the overall debtor or creditor position.

Amounts in millions € adopted as at 31 December	2015	2016	2017	2018	2019	2020
Accounts outside merger of Community schools of the FWB	0.0	0.0	0.0	0.0	0.0	0.0
Foreign currency provision accounts	0.1	0.1	0.1	0.1	0.1	0.1

The low level of “outside merger” current account holdings of FWB schools, or even their near disappearance as of 2013, can be explained by the decision taken by the FWB Ministry that the schools of the FWB network a “merger” account as the main account for current movements. Moreover, since 31/12/2013 the cashier is also able to provide the Debt Agency with the movements and balances on the savings accounts and the investment accounts of the said FWB establishments, accounts which are also excluding merger and which at 31 December 2020 showed a balance of €171.9 million compared with a balance on 31 December 2019 of 173.8 million, compared with a balance of €172.8 million at 31 December 2018, €175.9 at 31 December 2017, €163.4 at 31 December 2016, €163.9 million at 31 December 2015, and €162.4 million at 31 December 2014.

A.2. Evolution and breakdown of the non-consolidated long-term Community debt

The evolution from 1991 to 2020 of the total long-term Community debt (item [3] in the first table under point A.1) is as follows:

FIGURE 1
Evolution of the outstanding non-consolidated long-term Community debt (in € million)

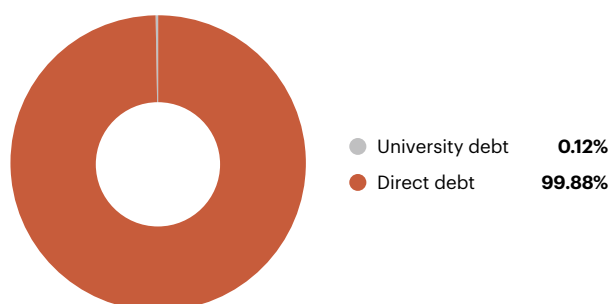

Whilst the long-term Community debt had been stabilised in nominal terms for the period 2002-2008, in 2020 it showed an increase (as it has done every year since 2009) linked primarily to the net balance to be financed for the financial year (see point A.3 below).

Its relative evolution is presented in the table below:

Variation of the non-consolidated long-term community debt			
Year	Amount in million €	Variation in million €	Variation in %
1991	218.1		
1992	559.1	341.0	156.32
1993	744.9	185.8	33.23
1994	1,531.7	786.8	105.61
1995	1,707.2	175.5	11.46
1996	1,858.6	151.4	8.87
1997	2,022.9	164.3	8.84
1998	2,187.3	164.3	8.12
1999	2,328.5	141.2	6.46
2000	2,530.7	202.2	8.68
2001	2,741.5	210.8	8.33
2002	2,803.5	62.0	2.26
2003	2,884.6	81.1	2.89
2004	2,884.6	0.0	0.00
2005	2,890.0	5.4	0.19
2006	2,888.5	- 1.6	- 0.05
2007	2,888.4	- 0.1	- 0.00
2008	2,888.0	- 0.4	- 0.01
2009	3,364.3	476.2	16.49
2010	4,104.5	740.3	22.00
2011	4,370.6	266.1	6.48
2012	4,622.7	252.1	5.77
2013	4,904.0	281.2	6.08
2014	5,124.6	220.6	4.50
2015	5,489.9	365.4	7.13
2016	6,133.1	643.2	11.72
2017	6,407.0	273.9	4.47
2018	6,768.6	361.6	5.64
2019	7,249.8	481.2	7.11
2020	8,737.1	1,487.3	20.5

The breakdown of the various components of the total long-term debt in 2020 is as follows:

FIGURE 2
Breakdown of the outstanding debt of €8.737.14 million as of 31/12/2020

The relative share of the university debt thus continues to decrease, as is reflected in the table below, and will be paid off completely on 1 December 2037, if no redemption before due date is made in the meantime.

Distribution of the long-term outstanding amounts as at 31 December				
Year	Total debt in million €	Indirect debt in million €	Direct debt in million €	Direct debt in % of the total debt
1991	218.1	0.0	218.1	100.00
1992	559.1	0.0	559.1	100.00
1993	744.9	0.0	744.9	100.00
1994	1,531.7	591.9	939.8	61.35
1995	1,707.2	574.6	1,132.6	66.34
1996	1,858.6	564.9	1,293.8	69.61
1997	2,022.9	558.0	1,464.9	72.42
1998	2,187.3	563.4	1,623.9	74.24
1999	2,328.5	555.7	1,722.8	76.13
2000	2,530.7	547.9	1,982.8	78.35
2001	2,741.5	466.1	2,275.4	83.00
2002	2,803.5	441.7	2,361.8	84.25
2003	2,884.6	432.4	2,452.2	85.01
2004	2,884.6	286.5	2,598.1	90.07
2005	2,890.0	259.5	2,630.5	91.02
2006	2,888.5	183.6	2,704.8	93.64
2007	2,888.4	181.3	2,707.0	93.72
2008	2,888.0	179.0	2,709.0	93.80
2009	3,364.3	176.7	3,187.6	94.75
2010	4,104.5	174.2	3,930.3	95.76
2011	4,370.6	98.2	4,272.4	97.75
2012	4,622.7	96.0	4,526.7	97.92
2013	4,904.0	93.8	4,810.2	98.09
2014	5,124.6	91.5	5,033.1	98.21
2015	5,489.9	89.1	5,400.8	98.38
2016	6,133.1	14.1	6,119.0	99.77
2017	6,407.0	12.9	6,394.0	99.80
2018	6,768.6	12.1	6,756.5	99.82
2019	7,249.8	11.2	7,238.5	99.84
2020	8,737.1	10.4	8,726.7	99.88

A.3. Financing balances and cooperation agreements

It should be pointed out that from 2003 onwards the methodology used to determine the financing balance of public entities was substantially modified in application of the instructions of the ESA1995. This has resulted in a broader range of bodies included within the Community's consolidation sphere. Thus, since 2003 a number of adjustments have been incorporated into the way the financing balance is calculated, resulting in the calculation of the Federation's budget result dovetailing more closely with the European Commission's accounting stipulations. This has called for budgetary policy to be adapted.

Moreover, the new ESA2010 European standard for the calculation of national accounts entered into force in September 2014. This new methodological review is the result of a long-term development and is part of an international framework. Its aim is to capture more effectively the specific transformations of contemporary economies. The historical financing balances are illustrated in the table below. The financing balances for the year 2010 and following years are calculated on the basis of this new methodology. The figures were published by the Institute of National Accounts (ICN) on 30 September 2014 on the website of the National Bank of Belgium (NBB) at: <http://www.nbb.be/belgostat> and are included in the successive reports of the High Council of Finance (CSF). The historical financing balances for the years 2001 to 2009 are those calculated by the State Audit Office and other public audit institutions and are published by the CSF in its successive reports. More often than not the CSF updated the State Audit Office's calculations. All reports from the High Council of Finance are available on their website at the following address: <https://www.highcounciloffinance.be/en>.

The table below shows that the Federation Wallonia-Brussels has more than fulfilled the objectives it was set (by joint agreement) in the field of financing balance over the last few years:

Financing balances achieved compared to objectives			
Year	Objective in € million	Financing balance achieved in million €	
2001	- 79.0	- 57.1	Financing balance better than objective by €21.9 million
2002	- 99.0	- 88.9	Financing balance better than objective by €10.1 million
2003	- 28.7	- 28.9	Near-attainment of objective: financing balance below objective by €0.2 million
2004	- 40.5	- 11.5	Financing balance better than objective by €29.0 million
2005	- 6.5	- 6.6	Near-attainment of objective: financing balance below objective by €0.1 million
2006	1.0	7.3	Financing capacity exceeding objective by €6.3 million
2007	- 40.2	- 32.6	Financing balance better than objective by €7.6 million
2008	8.4	58.6	Financing capacity exceeding objective by €50.2 million
2009	- 266.5	- 265.2	Financing balance better than objective by €1.3 million
2010	- 727.1	- 708.7	Financing balance better than objective by €18.4 million
2011	- 328.0	- 145.6	Financing balance better than objective by €182.4 million
2012	- 250.15	- 152.9	Financing balance better than objective by €97.25 million
2013	- 228.0	- 142.8	Financing balance better than objective by €85.2 million

Following the economic and financial crisis, the full effects of which were felt for the Federation Wallonia-Brussels from 2009 onwards, a new cooperation agreement was entered into on 15 December 2009 between the federal authority and the federated entities aimed at achieving budgetary balance in 2015 and a maximum deficit of 3% of GDP in 2012. It is in this context that the FWB was set the following objectives: a net financing balance of €- 266.5 million in 2009 and of € - 727.1 million in 2010. Both in 2009 and in 2010 the Federation attained financing balances that were better than the objective set in the Cooperation Agreements.

For the years 2011 and 2012, the objectives stemmed from the agreement of 3 February 2010 and respectively amounted to € - 548.0 million (2011) and € - 438.1 million (2012). The initial objective for the year 2011 was a deficit of €548.0 million which was reduced to a deficit of €328.0 million as agreed between the Governments of the French Community and the Walloon Region by means of notification of the Inter-ministerial Conference on the Budget and Finance of the standard transfer of €220.0 million on 8 February 2012. As the High Council of Finance explained in its report of October 2012 (p. 92) for the achievements in 2011: "In achieving a positive margin (...) vis-à-vis this objective of € - 328.0 million, the French Community has met not only the indicative objective of the draft agreement arising from the consultation with the federal authority, but also its own objective after transfer of the objectives".

Similarly, the budgetary objective for the year 2012 (which had initially been set at € - 438.1 million) was reduced during the first budget adjustment to a deficit of €359.5 million following the standard transfers to the Walloon Region to the tune of €77.1 million and to the Brussels-Capital Region for an amount of €1.5 million. Better still, during the second adjustment of the 2012 budget, the FWB had set itself a deficit of €250.15 million as an objective of its own, i.e. an additional improvement of €109.35 million. In its November 2013 report, the High Council of Finance explained on pages 112-113: "... the French Community meets the indicative objective of the draft agreement of February 2010, adapted to take account of the transfer of standards (...). Given the size of the margin, the Community has also met its own objective that it had set itself during the second adjustment of the 2012 budget".

For the year 2013, the agreement on the distribution of the budgetary objectives between federal authority and the Communities and Regions (Entity II), embodied in the decision of the Consultative Committee of 2 July 2013, made provision for an overall objective for the Entity II of € - 537.0 million (representing - 0.1% of GDP), including a maximum deficit objective set at €228.0 million for the FWB. As stated in the above-mentioned table, the Community's achievements were assessed by the ICN in September 2014 as amounting to € - 142.8 million, i.e. a positive margin of €85.2 million.

The effective introduction of ESA2010 together with the methodological adjustments brought by the ICN upon request from Eurostat have led to a broadening of the perimeter of the FWB and to adjustments to the target objectives that the Kingdom and each specific entity have to reach. These target objectives towards the EU have been translated into medium-term objectives, i.e. to achieve budgetary balance on the medium term. With this in mind, the Government of the FWB also sets annual targets in the context of the successive budgetary adjustments, the aim of which is to return to structural balance in the medium term. The abovementioned annual targets are internal to the French Community and are not targets negotiated with the other entities of the Kingdom, for example, in the Consultative Committee. Compared to the objectives set out in the Notes to the Government, relating to the preparation of the respective adjusted budgets, the achievements can be presented as follows:

Year	Objectives in € million	Achievements in € million	Source 'Achievements'
2014	-92.3	-214,1	Eurostat Notice of April 2021
2015	-239.0	-275,6	Eurostat Notice of April 2021
2016	-246.3	-65,8	Eurostat Notice of April 2021
2017	-221.1	-207,7	Eurostat Notice of April 2021
2018	-220.9	-202,7	Eurostat Notice of April 2021
2019	-507.6	-323,1	Eurostat Notice of April 2021
2020	-1,837.7	-1.676,8	Eurostat Notice of April 2021

B. Breakdown of debt components

This report only relates to debt the management of which is incumbent upon the Debt Agency of the Federation Wallonia-Brussels, that is to say, so-called "direct" and "indirect" debts. Secured debt and debt intended to finance the construction of cultural and academic infrastructure, etc., are therefore excluded.

B.1. Direct debt

Originally, the FWB's direct debt solely consisted of loans contracted to meet its own requirements. Now, since the mid 1990's the refinancing of the indirect debt redemptions has been incorporated into the direct debt. Consequently, the current evolution of the outstanding direct debt encompasses the re-borrowing of the redemptions of the direct debt, but also the redemptions of the indirect debt.

According to public accounting standards, re-borrowing of debt redemptions does not constitute an increase of its liabilities insofar as this refinancing corresponds to the repayment of an equivalent amount.

The evolution of debts outstanding as at 31 December in respect of direct debt (in € million) for the years 1991 to 2020 can be schematised as follows:

Year	Loans	Amortisations	Re-borrowed from amortisations (including indirect debt)	Outstanding at 31/12
1991	218.1	0.0	0.0	218.1
1992	345.8	4.8	0.0	559.1
1993	224.3	38.5	0.0	744.9
1994	179.2	57.8	73.5	939.8
1995	175.5	67.1	84.4	1,132.6
1996	151.4	70.2	79.9	1,293.8
1997	164.3	57.6	64.5	1,464.9
1998	151.8	46.6	53.7	1,623.9
1999	141.3	585.8	593.4	1,772.8
2000	202.1	433.5	441.4	1,982.8
2001	210.8	411.7	493.5	2,275.4
2002	62.0	189.6	214.0	2,361.8
2003	81.1	421.5	430.6	2,452.2
2004	0.0	518.1	664.0	2,598.1
2005	5.4	417.3	444.3	2,630.5
2006	0.0	120.7	195.0	2,704.8
2007	0.0	24.8	27.0	2,707.0
2008	0.0	253.0	255.0	2,709.0
2009	476.2	447.9	450.3	3,187.6
2010	740.3	447.9	450.3	3,187.6
2011	266.1	409.4	485.4	4,272.4
2012	252.1	252.0	254.2	4,526.7
2013	281.2	223.3	225.5	4,810.2
2014	220.6	300.4	302.7	5,033.1
2015	365.4	216.9	219.2	5,400.8
2016	643.2	580.6	655.7	6,119.0
2017	273.9	673.5	674.7	6,394.0
2018	361.6	1,039.9	1,040.2 ²	6,756.5
2019	481.2	610.5	611.4	7,238.5
2020	1,487.3	494.8	495.6	8,726.7

² Including € 463.6 million of commercial paper that is periodically amortized in advance to be converted into loans with longer maturities.

In **2014**, the amount of loans coming to maturity was evaluated at €302.7 million³ and was covered by means of nine issues (six of which under EMTN and three under Schuldschein format) carried out during the first four months of the year. For the surplus intended to meet the net balance to be financed, the decision was taken to await the formation of a new government further to the elections of 25 May 2014. So it was that a total amount of €520.5 million was ultimately borrowed in order to cover all the gross borrowing requirements for the year 2014. The nominal stock of Community direct debt at the end of 2014 was of €5,033.1 million.

The total amount of debt expected to mature in **2015** (excluding options) was evaluated at €219.0 million. This amount needs to be increased with the financial deficit caused by the budget imbalance initially estimated at €204.0 million and later updated in October 2015 at €328.0 million. These gross financing needs have been met via 16 long-term issues⁴ for a total amount of €482.5 million and by the reactivation in November 2015 of a quarterly short-term commercial paper / EMTN programme for an amount of €100.0 million in order to benefit from the interest expressed by the market for such type of products, which can be issued sometimes at rates significantly below 0%. On 31 December 2015 the long-term nominal direct debt of the FWB was measured at €5,400.8 million.

The total amount of borrowings maturing in **2016** was €467.5 million, an amount to which €188.1 million was added in the second half of 2016 that represents the short-term credit lines replaced by long-term credit lines to take advantage of low interest rates while reducing the risk of refinancing in the short term⁵. The abovementioned depreciation, in addition to the needs related to the estimated budget imbalance (Expenditure - Revenues - Underutilization of appropriations) and the amount earmarked for the pre-financing of 2017 requirements, were fully covered with 31 issues totalling €1,305.0 million at a weighted average rate of 0.84% for a weighted average duration of 16 years, bringing the total long-term direct debt at the 31st December to €6,119.0 million.

As noted in the annual report "Financing and Strategy", **the gross financing requirement for 2017** consists of maturing borrowings amounting to a total of €675 million (to which €300 million could be added if the options are exercised) and of the need stemming from the budget imbalance. In 2017, the financing requirement related to the initial estimated budget imbalance amounted to €-425 million (later re-evaluated at €-471 million after the budget follow-up). The gross requirement which the FWB would have to borrow in 2017 was thus at least more than €1,100 million, not including pre-financing undertaken in 2016. This need was covered in its entirety through 16 EMTN issuances (€655 million) and two Schuldschein borrowings (€101 million), which were completed by the reactivation of three credit lines, renewable quarterly and biannually, for €188.3 million. In the end, the total amount raised of € 944.0 million was concluded for a weighted average maturity of 19.7 years and at a weighted average rate of 1.03%.

3 Including the inaugural issue of €300.0 million of the EMTN programme carried out for a maturity of 10 years, the remainder chiefly pertaining to university debt.

4 Twelve issues under EMTN format for a total amount of €351.5 million and four issues under Schuldschein format for a total amount of €131.0 million.

5 The amount of loans that may mature in 2017 is reduced by the same amount to amount to €300.0 million at the end of 2016, compared with €488.0 million a year earlier.

The gross financing requirement for **2018** was significant and consisted of a certain amortization of just over €576.3 million and an additional deficit (revenue/expenditure gap) of €376.4 million measured during the budgetary adjustment. As mentioned above, it was decided to replace all the short-term lines (€ 463.6m) present in the Community's debt portfolio with long-term loans in order to secure the FWB's debt on a longer term as much as possible, all while benefiting from a low long-term interest rate environment and responding to the investors' strong demand for quality paper. The coverage of the gross requirements for the year 2018 was achieved through 39 EMTN issues (for a total of € 1,049.6 million), 5 Schuldschein issues (€ 162.5 million in total) and a loan of €130.0 million from the European Investment Bank. Note that commercial paper was issued for €50.0 million with a maturity of six months for the period 01/02/2018 to 01/08/2018 as a provisional underlying of a callable swap of which the option was not exercised by the bank. The total funding for 2018 was made at a weighted average rate of 1.42% for a weighted average duration of 20.9 years.

The gross financing requirements of **2019** consisted of maturing borrowings amounting to a total of €611.0 million (to which €75 million could be added if the options are exercised), and of the need stemming from the budget imbalance (revenues/expenditures excluding reduced credit requirements). In 2019, the financing requirement related to the initial estimated budget imbalance added up to €354.0 million. The gross requirement which the FWB would have to borrow for the year of 2019 would thus lie in the range of €965.0 million and €1,040.0 million, excluding pre-financing undertaken in 2018 and without prejudice to the evolution of the macroeconomic parameters and therefore the adjustment of the 2018 budget. Ultimately, an amount of €1,076.5 million was covered through 34 operations: 3 withdrawals with the EBI and the ECB (€320.0 million), 29 EMTN issuances (€655 million) and two Schuldschein borrowings. A total weighted average amount of €31,6 million was raised in 2019, with a weighted average maturity of 32.72 years and at a weighted average rate of 1.13%.

Finally, the gross financing requirements of 2020 consisted of maturing loans amounting to a total of €494.0 million (to which €75 million could be added if the options are exercised), and of the need stemming from the budget imbalance (revenues/expenditures excluding reduced credit requirements).

In 2020, the financing requirement related to the initial estimated budget imbalance added up to €844.0 million. The gross requirement which the FWB would have to borrow for the year of 2019 would thus lie in the range of €1,338.0 million and €1,415.0 million, excluding pre-financing undertaken in 2019 and without prejudice to the evolution of the macroeconomic parameters and therefore the adjustment of the 2020 budget.

In June 2020, following the Covid-19 crisis, a decrease of the GDP, estimated at 10.6% by the federal Office of the plan, was expected. This means a loss of revenue estimated at €1,000 million, excluding the support fund for the cultural sector. Ultimately, an amount of €1,958.5 million (excluding the €324 million prefinancing performed in 2019) was covered through 24 operations: two six-month € 175 million withdrawals with the EBI and 22 EMTN issuances including for the first time since 2011 a € 600 million benchmark type emission (more information in the section C.2.1) . The total financing amount was raised with a weighted average maturity of 11.85 years and at a weighted average rate of 0.145%.

B.1.1. Traditional and structured private loans

The Federation Wallonia-Brussels has issued traditional private loans and structured private loans since respectively 1991 and 1995. These loans are contracted with different financial institutions, the number of which has increased substantially over time. Indeed, at the end of 2018, 30 different counterparties were active financial intermediaries for FWB's financing (compared to 9 at 31/12/2008), despite the numerous mergers / acquisitions / dissolutions these last years in the banking sector.

The structured products used to secure loans can be extremely varied (e.g. swaption, series of swaptions, cap, floor, options with activating or deactivating barrier, etc.). They are worked out internally or offered by a counterparty concomitantly with an underlying loan. The decisions to proceed on the subject mainly result from the impact brought about by the structured product compared with the financing costs and the risk. In March/April 2012 and January 2013, the FWB concluded three **Inflation Linked** issues for a total amount of €106 million in EMTN format – issues with a 10-year maturity and index-linked to the Belgian general consumer price index. This particular index was adopted since it is the one that impacts directly on Community revenues. Seeing as the cover was natural with an interest charge variation according to the variations of revenues in the event of movements in the rate of inflation, the issues were obviously not swapped. In order to enlarge the scope of potential investors interested in this type of instrument, three issuances linked to the European inflation were undertaken in September 2017 and in the beginning of 2018, for a total amount of €75 million and maturities stretching from 13 to 30 years. Twelve inflation linked issues, having as benchmark the Belgian health index, were concluded with rate bonus of minimum 15bp (compared to the pricing applied to European inflation), in respectively February, June, November and December 2018, for a total notional amount of € 310 million⁶. As per usual, the inflated capital will, year on year, in budgetary terms on a segregated transit account, be fully passed on in such a way that the final reimbursed capital will have been reconstituted over the duration of the borrowing. The annual rate in millions of issues has therefore been as follows:

Year	Notional amount
2012	86.0
2013	20.0
2017	20.0
2018	365.0
Total	491.0

⁶ As the Community Treasury Council has recommended not to exceed 7.5% of the debt portfolio in this format, as of the end of December 2018, the FWB has no longer responded to the additional requests expressed by investors for Inflation Linked issues - with a preference for European inflation as a benchmark. On 20/12/2018, a € 50.0M Inflation Linked loan was concluded for a period of 7 years with the funds being made available on January 10, 2019 at a real rate of -0.815% and a coupon of 0.0%. The total notional amount issued in this format was then measured at € 491.0 million. On the 9th of January 2020, this share has shifted from 7.5% to 15%.

On February 17, 2012, the FWB concluded a **MultiTranche Schuldschein** financing for a total amount of € 100.0 million, including a € 34.0 million Mother Tranche available in 2012 and three Baby Tranches of € 22.0 million each being deliverable in respectively 2016, 2017 and 2018. Coupons with CMS-type structures were immediately hedged via a receiving swap of this coupon and a fixed rate payer for the Mother Tranche and a variable rate indexed on the Euribor for the three Baby Tranches. Because of its complexity, such a structure can only be concluded after the investor has (a German insurer) met in a one-to-one with the proposing bank, and after a favourable opinion of the Common Treasury Board that was consequently approved by the Minister of Budget and Finance. The initial structure covered the period from March 5, 2012 to March 5, 2032. On October 16, 2015, in order to simplify the architecture of this structure, while taking advantage of the relative low interest rates and meeting the lender's wish to advance its investment, the Baby Tranches have been restructured into one € 66.0 million tranche paying fixed rate for the period from 28/10/2015 to 28/10/2030.

A key element in the global debt management strategy followed by the FWB is the flexibility⁷ it offers towards intermediate counterparties and / or direct investors with regards to timing, maturity, and coupon structure (e.g. fixed rate versus variable rate, vanilla product versus structured product...) of issues.

Following a road show, conducted in Paris at the end of November 2012 in the form of one-to-one meetings, a capped and floored structured issue, whose coupon is indexed on the CMS and associated with a receiver mirror swap on the indexed CMS coupon and a fixed rate payer, was concluded for an amount of € 100.0 million and is due on 28/09/2034.

In the course of May 2013, a so-called "**OLO Participation**" issue was concluded in the legal framework of the EMTN program for an amount of €100.0 million with a maturity of 20 years, the coupon is indexed annually to the OLO 8 years. Moreover, this issue is capped at 5.2% and floored at 0.0% for the entire term of its life. Given the ties between the OLO and FWB's yield curve, the OLO trend risk is not a new risk to be followed, but a natural risk for the FWB. Furthermore, there is virtually no market for this type of product, which is therefore difficult or even impossible to cover.

In June 2013 the FWB was also able to conclude a **30np20⁸ puttable issue** for an amount of €100.0 million under the EMTN program at a subsidised interest rate priced on the MidSwap 20 years. With this product, in 20 years' time and on a precise date, the investor has the opportunity to extend his investment by a further 10 years under the same conditions. This issue is taken up with a maturity date at 20 years in the Community debt's redemption profile as this is a customary precautionary principle in the FWB's debt management. It was possible to conclude a similar operation in January 2014 for a 40np20 puttable issue (extendable loan of 20 years in 20 years) for an amount of €100.0 million at a subsidised interest rate for the FWB on the MidSwap 20 years. This issue is also treated as one with a maturity of 20 years, even if the investor has the possibility to extend his investment for another 20 years under the same conditions. For the latter two cases, the FWB pays the 20-year rate plus a significant bonus, while the loans can last respectively 30 years and 40 years (in the best case), 20 years if the loans are not extended.

7 Together with communication, reactivity and transparency.

8 It is about a loan that is 20 years extendible in 10 years' time: if the option is exercised, the loan will have a maturity of 30 years, if the option is not exercised the loan will last 20 years. Likewise for the 40np20 issue, if the option is not exercised by the investor, the loan will last 20 years, if it is exercised, it will be a 40-year maturity.

In September 2020, a new 60np30 30-year loan amounting to € 50 million was issued at a subsidised interest rate on the MidSwap 30 years. With this product, in 30 years' time and on a precise date (2050), the investor has the opportunity to extend his investment by a further 30 years under the same conditions

In an environment marked by the continued quantitative easing strategy of the ECB and the persistence of low or even negative rates for shorter maturities, some investors have increasingly sought, during 2016, inter alia, very long maturities to meet their absolute return requirements and / or very short maturities, in order to bear the negative rates only during a period as short as possible; and / or products delivering a low coupon in the first years, or even no coupon at all, so as not to overburden their excess cash; etc. In line with these perspectives, the FWB agreed on 7 April 2016 to issue an amount of €100.0 million, with a maturity of 60 years, at a rate of 2.00%, for a European insurer, which was possibly German. Additionally, the FWB agreed to issue a total amount of €300.0 million at a negative rate with a maturity of 2.5 years, through 3 private placements that were concluded on 6 January, 27 January and 1 June, at a weighted average rate of -0.083%. The FWB agreed to issue, at a variable rate indexed to the 3-month Euribor, two issues totalling €25.0 million. This was concluded on 20 May 2016 with an increased margin so that the expected future coupons are not negative and that the incorporation of the value of the implied minimum is at 0% for the coupon (the increase in spread was, of course, reflected in the price). At the end of the year, the FWB agreed to issue an amount of €10.0 million for an investor, who wished to receive a very low coupon for the first 4 years, (**so-called step-up**) with an increase in the real rate of about 15 points. The actual interest expense is smoothed out uniformly budget-wise year by year for the entire duration of the 13-year borrowing that was concluded on 25 November 2016. Similarly, in January 2017, an issuance of €150 million was concluded with a -0.453% coupon for two years. The borrowings at three months (€100 million) and six months (€88 million) concluded at the end of the year had coupons of -0.42% and -0.47% respectively. Regarding longer maturities, a German insurer did not hesitate to invest €80 million in FWB with a coupon of 2.5% and 70 years to maturity. This investment was realised on July 4th 2017, underlining the market's confidence in the French community. It is suitable to note that three **Zero Coupons**, of around €50 million each⁹, with a maturity of 20 years, were concluded for which the budgetary impact is smoothed throughout yearly budget entries of unpaid interest for the entirety of the duration of the borrowings. The charge will thus not be concentrated to the year in which they mature. Two other issues in this Zero Coupon format were concluded for 20 years respectively on February 2, 2018 (€ 99.2 million issue at a nominal rate of 1.81%) and March 7, 2018 (€ 70.5 million at a nominal rate of 1.785%).

Finally, note that the FWB's borrowings that are concluded for **periods exceeding OLO's longest maturity** (currently 2066), is obtained by simple linear extrapolation of the past two OLOs, namely OLO2057 and OLO2066. This is how the rate was set for the loan concluded with a South Korean Insurer on August 9, 2018 with a maturity of 50 years and an amount of €30.0 million (investment made by a South Korean insurer). In April and July of 2019, three issuances with a maturity of 70 years were carried out for a total amount of €140.0 million.

⁹ The amounts to be repaid at maturity are € 70.0 million (nominal rate = 1.7412%, fixing January 12, 2017), € 77.0 million (nominal rate = 2.02%, fixing January 30, 2017) and € 75.0 million (nominal rate = 2.04%, fixing February 6, 2017). By definition, no interest will be paid during the term of the loans.

B.1.2. Loans under Schuldschein format

In order to meet the demands of German investors, the Federation has increasingly been using this type of format in recent years and has established standard documentation enabling considerable adaptability and flexibility. The Schuldschein are loan agreements under German law intended for professional investors who are thus exempted from entering these loans in their accounts at their market value. These issues are transferable in accordance with German law and are not listed; moreover, they are invested through a bank, which itself more often than not (although not necessarily) also performs the duties of Paying and Calculation Agent. In general, loans under the Schuldschein format are concluded for long maturities and may have simple structures. This format has been used intensively in the recent years and regularly since its reactivation in 2009, its absolute and relative shares in the FWB debt portfolio have evolved as follows:

Active as of 31 December	Absolute values (€)	Relative amounts (%)
2009	238,500,000.00	7.1
2010	346,500,000.00	8.4
2011	394,492,584.30	9.0
2012	504,809,822.41	10.9
2013	516,691,341.74	10.5
2014	861,881,379.22	16.8
2015	994,390,084.85	18.1
2016	1,295,972,929.18	21.1
2017	1,398,712,161.01	21.8
2018	1,563,975,959.83	23.1
2019	1,507,846,153.35	20.8
2020	1,510,827,341.73	17.3

With relatively flexible specific documentation having been drawn up, even very long-term financial operations can be concluded in this framework in a very short period of time – an aspect particularly appreciated by potential financial bankers.

Stock of *Schuldschein* as at 31/12/2020

B.1.3. Domestic commercial paper programmes – short, medium and long term

From 1994 until the end of 2003 the Federation had two domestic financing programmes with Belfius (the former Dexia Bank Belgium): one devoted to the short term for an amount of €1.1 billion and the other to the long term for €1.4 billion. Since then these two programmes have been combined into one. This enables FWB to issue treasury notes with a maturity of between one day and thirty years for a total amount of €2,500 million. This local programme has been regularly updated. The last update (mostly a technical one) dates from 16 July 2019.

Since it was set up at the end of 1994, the FWB has had recourse to its short-term commercial paper programme both for the management of its cash balances (see point B.3) and for that of its consolidated debt, be it for the floating part of the latter (successive roll-overs) or for the fixed part as underlying a derivative product.

Furthermore, on the basis of its former MTN (Medium Term Note) programme, the Federation Wallonia-Brussels has conducted OLCo (Community linear bond) issues as at December 1995. It has also had a short-, medium- and long-term financing programme with BNP Paribas Fortis (the former Fortis) since 2000 for an amount of €750.0 million. A third local financing programme, also for an amount of €750.0 million, was concluded on 8 February 2013 with ING, and this has helped increase still further the FWB's access to even wider sources of financing. This programme was updated on 8 July 2015.

It will be recalled that in the context of the diversification of its forms and sources of financing, the Federation has had the opportunity of using dematerialised issues similar to the German Schuldschein (see point B.1.2), and in so doing it has been able to take advantage of an attractive financing cost in view of other proposals received at the time.

B.1.4. EMTN financing programme

The rating¹⁰ awarded to the Federation Wallonia-Brussels by the Moody's Investor Services agency and the changes that have been introduced in the Special Financing Act relating to certain borrowing conditions applicable to the federated entities¹¹ have enabled the FWB to envisage a further diversification of its sources of financing, among other things through the setting up of an EMTN (Euro Medium Term Notes) programme on 15 December 2003. This has been periodically updated since then and annually since 2008, on 8 July each year. The last update of the program took place on July 8, 2020. A supplement to the program has been published on January 14, 2021.¹²

10 Aa3/P1: see on this subject the press releases, Analysis and Credit Opinion published by the Agency in December 2011. From the beginning of 2004 until the end of December 2011, the Federation was rated Aa1/P1. The two-notch decline came in the wake of that of the Kingdom, which had occurred a few days previously. The last specific publication by Moody's on the subject of the FWB date from December 2020 (Credit Opinion) and has reviewed the rating to A1 rating, with a negative outlook.

11 As a reminder, the most important change implies that the federated entities can henceforth finance themselves, since 2001, on the international capital markets without any particular authorisation from the federal authority. However, Article 49, § 3 of the LSF (Special Financing Act) lays down the duty to inform the [federal] Minister of Finance.

12 The annual update of 2021 has been realized on July 7, 2021. The program size has been raised to € 10,000 million.

Following a consultation of the market, the Federation gave a mandate to Deutsche Bank and Belfius for this programme to be set up. Apart from the two aforementioned banks, the dealers in the programme are: BIL, BNP Paribas Fortis, CBC Banque SA, Crédit Agricole CIB, Goldman Sachs International, HSBC France, ING and KBC Bank NV, J.P. Morgan Securities Plc and Landesbank Baden-Württemberg¹³.

Since its annual update of 2020, this programme offers the FWB the possibility of issuing short-, medium- and long-term paper (from 30 days to 100 years) for a maximum amount of €6,500.0 million. The issues can be either of a public or private type, with recourse, in particular, to the reverse inquiry procedure.

Since it was created, the EMTN programme has been capitalised in the long term as follows:

Year	Total amount issued in € million	Number	Weighted average rate after possible IRS	Weighted average maturity	EMTN available balance as at 31/12 in € million
Established on 15/12/2003 ; maximum volume : €1,500.0 million					
2004	535.00	4	4.005%	10.0 years	965.00
2005	425.00	7	4.144%	19.7 years	540.00
2006	195.00	4	3.714%	15.1 years	345.00
2007	27.00	1	4.318%	15.0 years	318.00
Updated : 11/01/2008 ; maximum volume : €2,500.0 million					
2008	30.00	1	3.811%	15.0 years	1,288.00
2009	488.00	9	3.268%	7.4 years	800.00
Updated : 08/07/2010 ; maximum volume : €4,000.0 million					
2010	547.00	12	3.245%	11.4 years	1,753.00
2011	603.50	8	3.899%	6.3 years	1,119.50
2012	396.00	6	3.316%	14.3 years	780.50
Updated: 08/07/2013 ; maximum volume : €5,000.0 million					
2013	493.44	13	2.717%	19.1 years	1,414.75
2014	177.00	7	2.847%	26.2 years	1,537.75
2015	351.50	12	1.140%	14.2 years	1,402.25
2016	1,005.00	22	0.621%	14.1 years	789.25
2017	654.66	16	1.321%	24.4 years	774.72
Updated: 09/07/2018 ; maximum volume : €6,500.0 million

With the setting up of this financing programme and thanks to having been awarded an excellent rating (which has been identical to that of the Kingdom from the outset), the Federation is seeking to secure enhanced visibility on the financial markers – something that allows it both to gain access to financing more easily and to optimise its financing costs.

As indicated in a previous table, the actual maximal authorised volume is €8,000.0 million (as decided on July 8, 2020). When updating the programme on 8 July 2013, it was decided in particular to have recourse to the programme's maximum volume increase clause so as to raise it to €5,000.0 million, as opposed to €4,000.0 million on 8 July 2010, €2,500.0 million on 26 May 2009 and €1,500.0 million when it was created in December 2003. This demonstrates the willingness to make greater use of a programme that has proved its added value in the field of sturdiness and flexibility of use. The available balance at 31/12/2020 amounts to €1,616.5 million.

Out of a concern for reduction of the liquidity and refinancing risk, credit lines that can be called upon at any time, without booking fee or non-utilisation charge, have moreover been opened as at 1994. In this way the Federation's financing capacity

was secured both in the short and long term at conditions fixed in advance (with regard to precise references) for a total amount of €150.0 million; this relates to two back-up lines each attached to monthly commercial paper renewals which have matured in February 2018.

The following graphs specify, for the total debt, the proportion of the exposure represented by the different types of loans on 31 December 2019 and on 31 December 2020.

FIGURE 3
Different types of loans within the total debt amounting to €7,294.78 million as of 31/12/2019

FIGURE 4
Different types of loans within the total debt amounting to €8,737.14 million as of 31/12/2020

B.2. Indirect debt – University debt

The Community debt includes the indirect debt. For the sake of coherence and rational management, the latter is administratively grouped with the direct debt in the part of the budget relating to the public debt.

The indirect debt corresponds to loans issued to the Federation Wallonia-Brussels by third-party organisations and the financial charges of which are to be paid, wholly or in part, by the FWB's budget.

The main characteristic of the indirect debt is that it is on the road to extinction. There are three reasons that can be advanced to explain this. Firstly, this debt is the result of loans contracted in the past. Secondly, there are currently no financial requests of this kind any more. And finally, seeing as the redemptions were refinanced via the direct debt, a shift of exposure is taking place between the two types of debt.

The universities' debt was contracted by the latter with a view to financing their real estate investments.

A distinction must be made between two types of investment:

- "academic" investments primarily aimed at the construction of buildings intended for teaching (auditoriums, etc.);
- "social" investments directed at the construction of buildings intended to house and provide services to students outside the lecture halls (student halls of residence, university refectories, etc.).

The financial charges (interest and redemption instalments) of the "academic loans" are borne in full by the Federation's budget. However, in the case of the "social loans" the FWB's budget only pays that part of the interest in excess of 1.25%. The remainder of the interest together with the redemption instalments of these loans are payments drawn from the budget of the universities themselves.

Following this distinction, only the universities' academic debt is considered as an integral part of the debt of the Federation Wallonia-Brussels.

Evolution of the outstanding amount of the academic university debt, 1994 – 2020 (in € million)

Year	Outstanding as at 01/01	Amortisation as at 31/12	Outstanding as at 31/12
1994	543.4	12.7	530.7
1995	530.7	14.4	516.3
1996	516.3	6.7	509.6
1997	509.6	3.8	505.9
1998	505.9	4.0	514.5 ¹⁴
1999	514.5	4.3	510.1
2000	510.1	4.5	505.7
2001	505.7	78.3	427.4
2002	427.4	5.1	422.3
2003	422.3	5.4	416.9
2004	416.9	130.4	286.5
2005	286.5	27.0	259.5
2006	259.5	75.9	183.6
2007	183.6	2.3	181.3
2008	181.3	2.3	179.0
2009	179.0	2.4	176.7
2010	176.7	2.4	174.2
2011	174.2	76.0	98.2
2012	98.2	2.2	96.0
2013	96.0	2.2	93.8
2014	93.8	2.3	91.5
2015	91.5	2.4	89.1
2016	89.1	75.1	14.1
2017	14.1	1.2	12.9
2018	12.9	0.8	12.1
2019	12.1	0.8	11.2
2020	11.2	0.8	10.4

B.3. Cash position

B.3.1. Total cash balance

The Federation Wallonia-Brussels cash in hand groups together all financial accounts through which the institution's revenues are received and expenses are paid. In this respect the cash flows reflect the execution of budgetary and extra-budgetary movements, such as operations on behalf of third parties and in particular capital operations relating to the consolidated debt (redemptions and re-borrowing).

¹⁴ The outstanding amount as at 31/12/1998 underwent a technical correction in order to take account of a university-type loan (debt relating to acquisition of the grounds of the Plaine des Manœuvres in Etterbeek) which had not been integrated into the outstanding amount of the indirect debt.

Following a consultation launched in June 2018, Belfius Bank was designated as a FWB Cashier for a period of five years from 1 January 2019. All the accounts opened by the FWB with its cashier see their balance consolidated every day so that a total cash balance can be determined.

B.3.2. Description of revenues and expenses

*** Revenues**

The Federation's revenues budget (formerly the ways and means budget) is basically fed by three types of sources of funds for which strict provision is made in the LSF, which guarantees the FWB's collection of them (see in this respect Article 54 § 2 of the LSF as detailed in point D.1 of Chapter I of this report). In this way the budgeted revenues are achieved from one year to the next in their entirety, a fact to which the State Audit Office's successive reports bear witness¹⁵.

The two main sources of Federation funding are, in decreasing order of importance, the shares of VAT and personal income tax that are transferred by the federal State to the Federation Wallonia-Brussels in strict application of the provisions of the LSF¹⁶. In addition to these two transferred revenue items there is also the allocation paid by the federal authorities for the financing of foreign university students enrolled in FWB educational establishments. These amounts are paid to the FWB in the form of twelfths on the first working day of every month of the year.

The Federation used to have tax resources at its disposal through the RRTV (radio and television licence fee). As from 2002, and pursuant to the reform of the financing act already mentioned above, the RRTV became a regional tax and was replaced by a compensatory allocation calculated on a fixed-rate basis and index-linked to the consumer price index. As part of the 6th State reform, for both the French and Flemish Communities, the allocation from the Radio and Television Licence Fee (RRTV) is removed and replaced by an equivalent amount incorporated in the allocations from VAT revenues.

As already mentioned in section C.5 of chapter I, the financial resources granted by the LSF to the FWB have been modified in 2014 with entry into force as at 1 January 2015. The French Community of Belgium has 4 different sources of financing (transition mechanism excluded):

1. non-tax revenues;
2. revenues from taxes and perceptions;
3. federal allocations; and
4. loans.

¹⁵ See in this respect, and up until 2013, the State Audit Office's reports published in May/June of year (t) on the prefiguration of the results of implementation of the budget for year (t-1). From the year 2014 onwards, the State Audit Office drafts a document, in the fourth quarter of the year (t), entitled "Audit of the French Community's General Account for the year (t-1)". So, the "Audit of the French Community's General Account for the year 2013" was produced by the State Audit Office on 31 October 2014 and published by the Parliament of the FWB on 5 November 2014 on its website: www.pfwb.be. The report for the year 2014 was produced on 4 November 2015, the report for the year 2015 was handed over on 28 October 2016, the report for the year 2016 was passed on October 31st 2017, the report for the year 2017 on October 30th, 2018 and the report for the year 2018 should be deposited in the Parliament of the FWB in October/November 2019.

¹⁶ Up until 2014 inclusive; i.e. before full entry into force of the LSF amended in accordance with the 6th State reform.

The transitional mechanism, which applies for the period 2015-2033, ensures the neutrality of the calculation method for the year 2015 compared with the method applied until the reform of the LSF, i.e. financial resources granted to FWB to finance its traditional areas of competence as calculated for the year 2015 are identical under both methods.

It should be noted that in the ESA1995, as in the ESA2010 for that matter, the loans concluded only form the subject of an entry in accounts established after the calculation of the financing balance; they therefore do not have any effect on the fulfilment or not of the budgetary objectives set by the cooperation agreements.

FIGURE 5
2020 revenues exclusive of appropriated revenues (Realisations)

Graph 6 presents the breakdown in relative values of the Federation's revenues for the year 2020.

The replacement of the Community tax (i.e. RRTV) by a fixed-rate allocation means that since 2002 the FWB's resources come for more than 98% from allocations transferred and guaranteed by the federal State. This situation helps strengthen the almost perfect predictability and low volatility of the Community institution's revenues. The RRTV allocation is incorporated in the so-called "VAT" mass since 2015 as foreseen by the LSF (last modified in 2014).

* Expenditures

The breakdown per main expense amounts of the Federation Wallonia-Brussels expenditures can be presented as follows:

- the Education, Research and Training sector represents a little over three quarters of the FWB's general expenditure budget. For the Education field (from nursery school to higher education level), a very large proportion of the expenditure goes towards payment of teachers' salaries;
- expenditure in the second most important sector (Health, Social Affairs, Culture, etc.) mainly consists of allocations or subsidies paid to the various different bodies with responsibility for implementation in these areas (RTBF, ONE, WBI, etc.);
- the allocations paid annually by the FWB to Wallonia and to the French Community Commission of the Brussels-Capital Region correspond to the amounts payable by the Federation in exchange for the transfer of the exercising of some of its powers to these two entities in accordance with the Saint-Quentin agreement;
- the General Services sector covers expenses mainly relating to the functioning of the Federation's institutions;
- the amount of expenditure for the Public Debt encompasses all charges linked to the debt (studies, fees, functioning, etc.) in addition to interest charges.

FIGURE 6
2020 expenditures exclusive of debt redemptions (Realisations)

B.3.3. Rate of collection of revenues and disbursement of expenditures

The French Community's rate of revenue collection and expenditure disbursement during the year 2020 is illustrated in the following graph:

FIGURE 7
Rate of revenues and expenditures for 2020 in € million

On the basis of the above figure it can be established that the Federation enjoys a relatively regular rate of collection of its revenues and disbursement of its expenditures. This phenomenon can be attributed to two factors:

- on the one hand, the majority of its revenues (its share of personal income tax and VAT and the allocation for foreign students) are paid by the federal authority in the form of twelfth-fraction payments at the beginning of every month (on the first working day of every month);
- on the other hand, a large proportion of the Federation's expenditure is devoted to payment of salaries, the periodicity of which is also spread regularly across the year at the end of the month (on the last working day of the month). Furthermore there is the fact that the allocations paid to Wallonia and to the French Community Commission (see above) by the FWB in the framework of the decree II are effected in the form of twelfth-fraction payments made on the second working day of every month.

However, the rate of expenditure disbursement is somewhat affected at the beginning of the year by some allocations that are paid on an annual basis instead of monthly basis. For this reason, the month of January generally shows an expenditure amount that is higher than during the rest of the year.

C. Principles of debt management

C.1. Reminder of the principles of debt management

The debt of the Federation Wallonia-Brussels is managed in observance of seven permanent principles. These principles are:

1. Harmonisation of financing and debt management operations

All operations relating to the management of both the direct and indirect debt are carried out by the FWB's Debt Agency. The Administration's other functional departments do not in any way intervene in this area. Moreover, all charges pertaining to these types of debt are grouped together within the Public Debt chapter of the general expense budget.

2. Optimal breakdown of the fixed-rate and floating-rate share of the debt according to the trend observed in the rates curve.

The rates curve is one of the main factors taken into consideration for the management of the Federation's debt. Indeed, this indicator helps determine a ratio aimed at dividing up the outstanding debt into a fixed-rate part and a floating-rate part. The objective is to obtain an optimal risk/yield ratio. For this reason, a major change in the slope of the rates curve usually triggers a repositioning of the fixed-rate/floating rate ratio, irrespective of the maturity of the loan. In this way, in the case of a sharply sloping positive curve, the positioning of the debt ratio will be directed more towards the floating rate, because a sizeable curve opening makes the use of short-term referenced financial instruments – loans or hedging derivative products – less costly. On the other hand, in the event of a relatively flat rates curve, the yield is relatively similar for all maturities. Therefore, faced with this kind of curve, the search for the best risk/yield ratio would involve increasing the fixed-rate part of the ratio.

Since 2010¹⁷, the risk of a change in the interest rates paid and the refinancing risk have been analysed on the basis of two different instruments:

- the fixed/floating rate ratio is used to monitor the risk associated with an increase in the interest rates paid on the part of the debt for which the coupon is variable. The floating rate part of the debt cannot exceed, at this moment, 15%;
- the ratio between the amount of debt that matures within the next 5 years and the stock of debt is used to monitor the refinancing risk. This measure has been set at 33,3%. Within the same train of thoughts, the part of the borrowings maturing or being called within twelve months cannot exceed 10% of the total outstanding amount.

The ratio variable/fixed rate has been maintained below 15% of the outstanding amount for the last seven years:

Variable rate	2015	2016	2017	2018	2019	2020
%	10.69%	8.19%	7.78%	12.48%	12.47%	11.32%

It should be pointed out that the natural reference of the Federation Wallonia-Brussels for its financing cost is the OLO curve, with which the spread is much less volatile than with the IRS. Given the close financial links between the federal State and the FWB, which are expressed through the LSF and are confirmed by the ratings (identical for the two entities), the OLO/FWB spread can only reflect the liquidity difference as the Belgium-specific risk is already incorporated in the OLO trend.

3. Active use of the most appropriate financial instruments

The Federation Wallonia-Brussels has recourse to the most appropriate financial instruments for the management of its debt. In this respect, any speculation is systematically excluded and every derivative product concluded is secured, or will be throughout its existence, with a component part of the Community debt.

Interest rate swaps have a prime place in the framework of rates curve management easily allowing the transfer of part of the fixed-rate debt to the floating rate, and vice versa.

In 2012, apart from the Inflation Linked loans (by way of a reminder, these are not swap hedged and are considered as floating-rate loans in the ratios), all the issues were concluded directly at a fixed rate or swapped to fixed rate when they were index linked to the CMS, for example. The fixed-rate ratio thus fell slightly vis-à-vis the previous year, and was measured at 91.07% as at 31/12/2012.

For the financial operations carried out during the year 2013, the Inflation Linked issue of €20.0 million and the OLO Participation¹⁸ of €100.0 million were classed in the variable-rate part of the debt portfolio, as was a loan of €25.0 million referenced on the Euribor; consequently the fixed-rate ratio dropped to 90.76% as at 31 December 2013.

¹⁷ See the FWB's 2015 and previous annual debt reports for a reminder of the former analysis grid used until 2010 for managing the optimal allocation of the fixed-rate share of the community debt.

¹⁸ Certain counterparties also call it BEC or OLO-TEC.

Four of the 17 issues carried out in 2014 to raise a total amount of €520.5 million were concluded at a variable rate, and one of them for an amount of €20.0 million was swapped to the fixed rate, the three others (for a total amount of €105.0 million) remaining index-linked to the Euribor. Thus, 79.8% of the amount borrowed in 2014 was borrowed at a fixed rate. This has resulted in the fixed-rate ratio being brought down slightly; it was calculated at 89.05% as at 31 December 2014.

In 2015, €482.5 million has been raised via 16 issues, almost always paying a fixed rate, either directly or after swap (97.9% of the issues carried out in 2015 are reported as fixed rate issues). Only one issue for an amount of €10.0 million has been realised and maintained at variable rate. As could be expected, the fixed rate ratio increased in 2015 and is evaluated at 89.31% as at 31/12/2015.

The search for yield probably prompted investors to express their preferences for long maturities with a fixed coupon in 2016: 92.7% of the total amount, €1,305.0 million, realized during the year was concluded through 31 issues at a fixed rate; only three issues totalling €95.0 million were indexed to the Euribor at their inception and were kept at variable rates. Therefore, at the end of December 2016, the fixed rate ratio of the Community's debt increased to 91.81%.

The observed tendencies in 2016 were confirmed in 2017, thus only the €20 million Inflation Linked issuance with maturity date July 25th 2038 concluded on September 26th 2017 was issued with a floating rate. The other 19 realised operations during the year for a total value of over €900 million have fixed rates (97.9% of the total borrowings in 2017). The fixed rate ratio as of December 31st 2017 of the Community's debt was 92.22%.

The variable rate portion increased sharply in 2018, reaching 12.48%. This was due to the numerous inflation-related issues concluded, totalling a notional amount of € 315.0 million. This amount excludes the € 50.0 million Inflation Linked ones concluded at the end of December 2018, with a departure date of early 2019. It is noted that this issuance is the only variable rate issuance part of the 2019 transactions. All other 33 transactions that took place in 2019 show a fixed rate. As such, the variable rate portion of the Community's debt has remained stable at slightly under 12.5% as of 31/12/2019.

In 2020, all the loans were issued at fixed rate leading to a decrease of variable rate proportion to 11.32%.

4. "Investor-oriented" strategy

The financing programmes (such as the EMTN) that the Federation Wallonia-Brussels has at its disposal enable it to provision its cash balances and its consolidated debt on an ongoing basis. The use of these programmes offers certain advantages: a reduction in the financing cost compared with the traditional average conditions in the short and (very) long term, and a possibility of reacting quickly so as to be able to take advantage of certain opportunities on the capital markets (the traditional consultation procedures being slower). Moreover, it enables a broadening of the investor base, accentuated, for that matter, by a proactive communication approach designed to familiarise foreign investors with the Belgian federal system and in particular the strength of the LSF which provides the FWB with the bulk of its revenues (more than 98%) in a foreseeable and guaranteed manner.

Implementation of the investor-oriented strategy is based on communication and transparency, the ability to react quickly to financing proposals, and flexibility of management thanks to adapted instruments and procedures.

5. Synergy in the financing and investment operations of the Federation Wallonia-Brussels and the public entities integrated in the ESA.

Since 7 February 1995¹⁹, the Federation ²⁰ has been exempt of the advance levy on income derived from securities when it invests its cash surpluses in dematerialised securities issued by public administrations (sector S13) included in the consolidation of the national accounts by the European authorities.

The approach adopted in the investment policy has been substantially modified as a result, the Federation has therefore only acquired securities issued by the federal State and the federated entities. In recent years, particularly since the emergence and persistence of negative Euribor rates, this investment policy was also strongly impacted by the fact that short-term investments in the market offered negative returns that were naturally not attractive for the FWB whose conditions are grounded at 0%: the only arbitrage possible is to keep the assets on accounts.

6. Management of the repayment schedule

The Federation Wallonia-Brussels constantly makes sure that its overall debt term, at least over the 4 year mark, is maintained so as to avoid having to deal with a sizeable refinancing volume over a short period and in the near future. In this way it is ensured an overall staggering of its debt over a long enough period. Nonetheless, it also sees to it that the maturity dates of its debt are diversified so as to avoid refinancing peaks and troughs insofar as is possible, and is in this way present on the market for relatively similar amounts every year.

The measure of limiting the amount of debt maturing within the next 5 years to a maximum of 50% of the outstanding amount of debt also contributes to this objective. It evolved, since 2010, as follows:

Year	5-year cumulative amortisation ratio
31/12/2010	39.3%
31/12/2011	38.5%
31/12/2012	46.0%
31/12/2013	47.0%
31/12/2014	42.9%
31/12/2015	46.1% → 48.4%
31/12/2016	43.1%
31/12/2017	39.1%
31/12/2018	26.5%
31/12/2019	21.9%
32/12/2020	19.2%

¹⁹ Royal Decree of 23 January 1995 amending the Royal Decree of 26 May 1994 on the collection and discounting of the advance levy on income derived from securities in accordance with chapter I of the Act of 6 August 1993 on operations on certain securities (entry into force at the time of publication in the Official Journal, on 7 February 1995).

²⁰ This provision applies to all public entities consolidated in the ESA.

With regard to the one-year refinancing risk, the principle of a maximum ratio of 15% representing the maturity of the borrowings maturing within the year in relation to the total stock of debt, is confirmed and has been supplemented, since 2015, to take into account the loans that may optionally mature within the year, as follows: the total potential amortization expiring in the first year (i.e., depreciation and amortization + optional depreciation) divided by the total debt cannot exceed 20%.

In December 2020, the 1-year refinancing risk increased to 10% at maximum following the decision of the Community Treasury Council.

It has evolved as follow:

Years	12-month cumulative amortisation ratio
2015	17.4%
2016	15.9%
2017	16.6%
2018	10.1%
2019	7.9%
2020	5.5%

Until 31/12/2018, the debt portfolio of the FWB includes short-term issues that are made under local or EMTN programmes and renewed on a periodic²¹ basis.

These short-term issues represent as of 31/12/2015:

- 2 monthly tranches guaranteed by firm commitments for a total amount of €150.0 million until 2018;
- 1 quarterly tranche for an amount of €100.0 million;
- 6 semi-annual tranches for a total amount of €312.7 million.

As of 31 December 2016, the quarterly tranche of €100.0 million has not been renewed, as well as two half-yearly tranches totalling €88.0 million. Therefore, remaining active at the end of 2016 are: four half-yearly tranches for a total amount of €224.7 million and two monthly tranches for a total of €150.0 million.

The 2017 financing requirement was met through reactivating the previously mentioned quarterly and biannual credit lines for a total sum of €188 million. This brings the total of active credit lines to €562.7 million, of which €150 million is renewed monthly, €100 million quarterly, and €312.7 million biannually.

The quarterly and semi-annual issues are renewed by putting about ten banks in competition and are essentially entirely subscribed even though almost all renewals in 2016, 2017, 2018, 2019 and 2020 were concluded at negative rates. However, they are not guaranteed by commitments and may - in the worst case scenario - face a drying up of the market.

²¹ By competitive tendering for 3-month and 6-month operations; operations not exceeding the month are de facto devolved to the Cashier by the Royal Decree of 6 August 1990 laying down the arrangements for the organization of the treasury of the Communities, the Regions and the Common Community Commission.

To remain prudent in its management of liquidity and to keep transparency, the FWB includes the quarterly and semi-annual issues that are not guaranteed by firm commitments (€175.0 million as at 31/12/2020) and the LOBO²² issue, which can optionally mature within the year (€75.0 million), in the ratio that measures the 1-year refinancing risk, which may not exceed 10%. The part of the debt that optionally matures within the year shifts progressively from one year to another and is added to the amount of debt that will certainly mature within the year. This operation is not neutral for the amortizing schedule, which becomes less smooth. This gives however more transparency and is conform to a reality that is less likely but still possible. By including the LOBO issue and the short-term issues that are not guaranteed by firm commitments in the ratios that measure the refinancing risk, the 1-year ratio goes from 15.0% to 17.4% as of 31 December 2015 and the five-year refinancing risk increases from 46.1% to 48.4% at the end of 2015. The amount in millions of Euro of these borrowings, which matured optionally during the year, has since changed as follows:

Year	PC & short term EMTN renewed at 3 months and 6 months	Lobo	Total
2015	413 million	75 million	488 million
2016	225 million	75 million	300 million
2017	413 million	75 million	488 million
2018	0 million	75 million	75 million
2019	0 million	75 million	75 million
2020	175 million	75 million	250 million

7. Principles of prudence, competitive bidding and efficiency of decision-making operations

By way of reminder, debt and cash management operations are excluded from the scope of the law of 2006 (ex-1993) on procurement contracts and certain contracts for works, supplies and services. This has been reconfirmed by the new law of 17 June 2016 on procurement contracts (MB 14 July 2016), which also reaffirms the principles of good management to be applied by the public authorities in the field of financial services: equality, non-discrimination, transparency, and proportionality. At FWB, the prices, rates, margins, etc. are systematically obtained after publication of a competitive call in a form adapted to the type of product, after being (in the vast majority of the cases and insofar as possible) subject to internal evaluation. Competitive bidding makes it possible to secure the best price, but it also enables a monitoring of the understanding of the product dealt with. Indeed, a sizeable price difference between the FWB and a counterparty may stem from a poor understanding of the transaction under way and can be corrected before the operation is concluded, thereby avoiding problems at a later stage.

Regarding the specific case of renewing three- and six-months borrowings after a call for tenders, it logically appears that this has had a positive effect on the conditions obtained by the FWB as demonstrated in the below table:

²² Lender's Option Borrower's Option: the investor has the option (but not the obligation) to offer a new rate only once during the term of the issue, the FWB has the option to accept the new rate, that is, then, applicable, until the final maturity in 2058, or to refuse the new rate and repay the loan upon exercise of the option.

Year	Tenders	Average issuance in € millions	Weighted average rate in %	Weighted average spread in bp vs Euribor	Weighted average bid-to-cover
2012	12	79.2	0.631	-3.19	1.2
2013	13	69.3	0.268	-3.78	2.2
2014	10	62.6	0.245	-5.09	2.4
2015	11	66.0	-0.115	-13.44	3.5
2016	11	76.2	-0.293	-9.81	2.3
2017	10	63.7	-0.384	-10.96	3.1
2018	7	80.4	-0.373	-7.78	3.4
2019	6	91.7	-0.387	-4.05	3.7
2020	4	87.5	-0.389	-2.74	3.7

We note that in 2012, only two local financing programs were utilised, specifically those concluded with Belfius and then with BNP Paribas Fortis. From 2013, a third local financing program was created and utilised with ING. Then, from 2014, the EMTN program was utilised also for the issuances of three and six months by the dealers who were not acting via the local treasury programs, most often by the “one day dealer” or “dealer a day” procedures.²³

C.2. Application of the management principles

C.2.1. The debt

Given that the FWB’s gross financing needs have increased considerably and in particular over the long term, especially since the 2007/2008 crisis, the FWB has stepped up its external communication policy (road shows, one-to-one, etc.) and its diversification policy not only in terms of products but also in terms of investors and counterparties / intermediaries. For example, the maximum gross requirement for 2017 was around €1,400 million compared to €27.0 million in 2007. Similarly, at the end of 2008 the FWB had a dozen counterparty / intermediary banks compared to twenty-six at the end of December 2017.

Furthermore, in order to try broaden its investor base, the Federation Wallonia-Brussels, as a debt issuer, decided in 2010 to supplement its financial rating awarded by Moody’s with an **extra-financial rating** awarded by the company Vigeo – the latter company having been selected further to a public procurement contract launched in the second half of 2010. The main objective was to demonstrate to investors that our missions, by definition in relation to the development of the company over the long term, are carried out in a socially responsible manner and that the extra-financial risks of an investment in FWB securities are limited. Vigeo carried out a CSR (Corporate Social Responsibility) analysis of the FWB and submitted its final report on 14 February 2011. This report awarded the Federation one of the best ratings (54/100 – rating < +>) awarded by Vigeo²⁴,

²³ A tool which allows a financial intermediary who is not a permanent dealer of the EMTN program to be named dealer for a specific program by FWB, materialised by a Dealer Accession Letter.

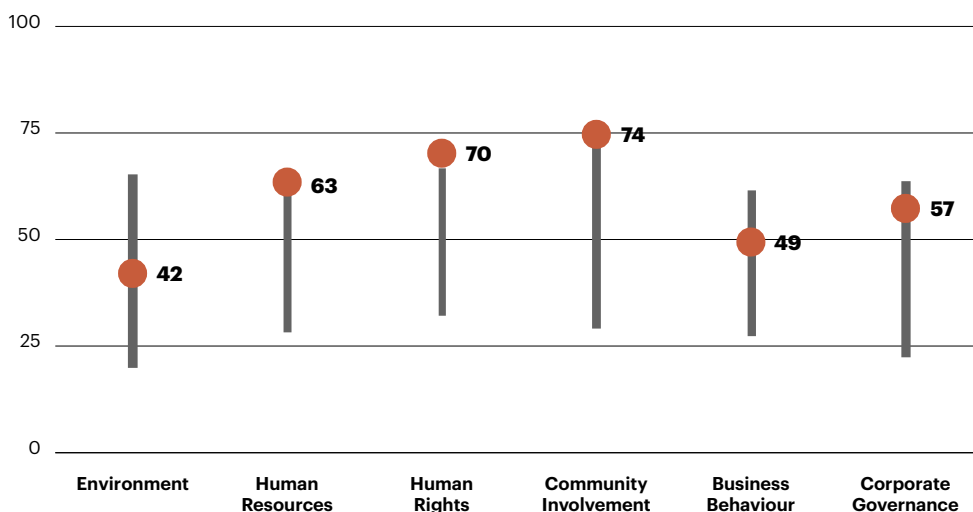

²⁴ For more details, see the document “Result of the assessment of the level of social responsibility achieved by the Ministry of the French Community at 14 February 2011” available on the website of the Directorate General of Budget and Finance of the SFBC (FWB) on the following address: <http://www.budget-finances.cfwb.be>; “News” section of March 21, 2011.

the second best at the time of the analysis of the sample group of 26 comparable local authorities that it had studied and/or audited in Germany, France, Italy and Spain, and thus for the first time, in Belgium.

This enabled the FWB to support the development of this market in the early 2010s by participating as a public debt issuer, which offered a diversification opportunity to SRI (Socially Responsible Investment) investors.

The extra-financial rating exercise was renewed in 2016 - again after appropriate competition - by the aforementioned agency which in the meantime became Vigeo Eiris, which issued its analysis at the end of the year and which can be schematized as follows:

FIGURE 8
Company's performance [●] comparison with its sector (min — max)

The Agency highlighted that the FWB has improved its previous good performance (reaching 57/100 - "Robust" social responsibility performance) and was ranked 4th in a panel of 30 comparable entities, behind two French entities and a German one. This good extra-financial rating enables the Federation to extend its borrowing opportunities and broaden its investor base; In addition, all of the borrowings that it carries out may continue to be classified as SRI.

The extra-financial rating of a socially responsible issuer allowed the FWB to successfully achieve **a SRI benchmark of 500 million in June 2011**, which was a particularly difficult period for sovereign and tied issuers. Although the rating was very good, the FWB has to submit programs that qualify a socially responsible, or Green or Social or Sustainable characteristics. This work will however be exploited in the near future.

From 2002 until 2008, the FWB only borrowed to replace maturing loans. As a result, the stock of long-term debt stabilised in nominal terms at € 2,800 million. This was no longer the case for the following years, following the banking and financial crisis, as the total amount borrowed during the period 2002-2008 amounted to € 2,300

million, representing an average annual amount of € 320 million to be raised on the financial markets. **Between 2009 and 2013**, on the other hand, while the average annual depreciation amount remained about stable at 310 million, it was necessary to raise funds for a total amount of 3.6 billion €, representing an average annual depreciation amount of 720 million and a total nominal long-term debt measured at € 4,900 million. Successive financing was made under the following conditions:

Year	2009	2010	2011	2012	2013
Total financing in € m	926.5	867.7	781.4	505.0	503.9
Weighted average rate in%	3.66	2.80	3.71	3.46	2.73
Average duration in years	10.1	10.1	6.5	15.9	19.1
Fixed rate share	64.8%	100.0%	97.7%	83.0%	71.2%
EMTN	52.7%	63.0%	81.1%	78.4%	97.9%
Schuldschein	14.9%	12.5%	6.1%	21.6%	2.1%
PC	32.4%	24.5%	12.8%	0.0%	0.0%

In 2014 it was a total amount of more than 500 M€ that had to be raised on the markets in order to meet the redemptions and the requirements arising from the budgetary imbalance; through seven issues under EMTN and some ten others in Schuldschein format on each occasion for long or very long maturities, as can be seen in the summary table below:

Format	Transaction	Start date	End date	Amount	Type of rate
EMTN	13/01/2014	22/01/2014	22/01/2024	20,000,000.00	Fixed Rate after hedging
EMTN	05/02/2014	03/03/2014	03/03/2064	32,000,000.00	Fixed Rate
EMTN	27/03/2014	07/04/2014	07/04/2044	25,000,000.00	Fixed Rate
EMTN	15/04/2014	28/04/2014	22/06/2023	30,000,000.00	Fixed Rate
EMTN	24/04/2014	07/05/2014	07/05/2029	10,000,000.00	Fixed Rate
EMTN	28/04/2014	12/05/2014	12/05/2054	35,000,000.00	Fixed Rate
EMTN	16/09/2014	23/09/2014	15/05/2025	25,000,000.00	Euribor
Schuldschein	27/01/2014	10/02/2014	10/02/2034	100,000,000.00	Fixed Rate
Schuldschein	01/04/2014	10/04/2014	10/04/2036	10,000,000.00	Fixed Rate
Schuldschein	06/05/2014	13/05/2014	13/05/2039	28,500,000.00	Fixed Rate
Schuldschein	16/09/2014	25/09/2014	25/09/2034	40,000,000.00	Fixed Rate
Schuldschein	16/09/2014	24/09/2014	24/09/2029	10,000,000.00	Fixed Rate
Schuldschein	16/09/2014	24/09/2014	24/09/2029	35,000,000.00	Euribor
Schuldschein	16/10/2014	30/10/2014	30/10/2034	15,000,000.00	Fixed Rate
Schuldschein	17/10/2014	24/10/2014	24/10/2035	20,000,000.00	Fixed Rate

Schuldschein	02/12/2014	09/12/2014	26/06/2040	40,000,000.00	Fixed Rate
Schuldschein	02/12/2014	12/12/2014	12/12/2025	45,000,000.00	Euribor
Total amount financed long-term in 2014: €520.5 million Weighted average rate after eventual hedging: 2.6% Weighted average maturity: 21.7 years Weighted average margin compared to OLO: 16.9bp Part financed at fixed rate after possible IRS: 79.8% Part financed under EMTN format: 34.0% Part financed under Schuldschein format: 66.0%					

Like in 2014, it **is an amount slightly above €500.0 million that had to be raised in 2015**. This amount was raised via 16 issues: 4 issues under Schuldschein format and 12 issues under EMTN programme. One of the issues (maturing in 2036) is composed of 2 tranches: the first tranche was contracted on 22 October 2015 for an amount of €30.0 million; the second tranche (tap) was added on 17 November 2015 for an amount of €20.0 million.

The table below gives the details of the long-term issues:

Format	Transaction	Start date	End date	Amount	Type of rate
EMTN	30/01/2015	13/02/2015	13/02/2045	20,000,000.00	Fixed Rate
EMTN	08/05/2015	22/05/2015	22/05/2019	79,500,000.00	Fixed Rate
EMTN	10/06/2015	17/06/2015	17/06/2041	31,000,000.00	Fixed Rate
EMTN	07/07/2015	13/07/2015	23/01/2045	35,000,000.00	Fixed Rate
EMTN	16/10/2015	28/10/2015	28/10/2019	52,000,000.00	Fixed Rate
EMTN	22/10/2015	29/10/2015	29/04/2036	30,000,000.00	Fixed Rate
EMTN	27/10/2015	03/11/2015	03/11/2025	10,000,000.00	Euribor
EMTN	27/10/2015	03/11/2015	03/11/2022	10,000,000.00	Fixed Rate
EMTN	28/10/2015	10/11/2015	10/11/2020	32,000,000.00	Fixed Rate
EMTN	28/10/2015	10/11/2015	10/11/2021	2,000,000.00	Fixed Rate
EMTN	17/11/2015	25/11/2015	29/04/2036	20,000,000.00	Fixed Rate
EMTN	16/12/2015	23/12/2015	23/12/2037	30,000,000.00	Fixed Rate
Schuldschein	24/06/2015	02/07/2015	09/12/2043	40,000,000.00	Fixed Rate
Schuldschein	02/07/2015	10/07/2015	10/07/2045	10,000,000.00	Fixed Rate
Schuldschein	16/10/2015	28/10/2015	28/10/2030	66,000,000.00	Fixed Rate
Schuldschein	20/10/2015	29/10/2015	29/10/2036	15,000,000.00	Fixed Rate
Total amount financed long-term in 2015: €482.5 million Weighted average rate after eventual hedging: 1.5% Weighted average maturity: 16.0 years Weighted average margin compared to OLO: 25.1bp Part financed at fixed rate after possible IRS : 97.9% Part financed under EMTN format: 72.9% Part financed under Schuldschein format: 27.1%					

The financing of the year 2015 has been finalized by the reactivation of a quarterly short-term commercial paper / EMTN programme on 16 November 2015 for an amount of €100.0 million and at a rate of -0.13%, equivalent to E3M-3.9 basis points granted to a French bank after competitive bidding.

The gross borrowing requirements for **2016** consisted of €467.0 million in borrowings and the requirement arising from the budgetary imbalance, originally estimated at €326.0 million, to which could be added €355.0 million optional, leading to an aggregate initial amount of around €793.0 million with a maximum of €1,148.0 million, without prejudice to the evolution of the macroeconomic parameters and thus to the adjustment of the 2016 budget. The phasing of achievements was carried out as follows, given that the options have not been exercised:

- a) the requirements for 2016 were fully covered as of 17 June 2016, including the budget heading;
- b) a series of three-month and six-month renewable lines were replaced by long-term borrowings (weighted average duration of nearly 18 years) for €188.0 million during the third quarter of the year;
- c) in order to anticipate the significant future needs, and with the low OLO rates, a total of €170.0 million was raised at the end of the year as pre-financing for the 2017 needs. This was done through six issues with improved margins.

A total of €1,305.0 million was borrowed from the markets through 31 issues, which were concluded at the pace and with the following essential characteristics:

Format	Transaction	Start date	Maturity	Amount	Rate
EMTN	06/01/2016	13/01/2016	13/07/2018	100,000,000.00	ZC (-0.016%)

<p>Total amount financed long-term in 2017: €1,305.0 million Weighted average rate after eventual hedging: 0.8% Weighted average maturity: 15.9 years Weighted average margin compared to OLO: 31.0bp</p> <p>Part financed at fixed rate after possible IRS : 92.7% Part financed under EMTN format: 77.0% Part financed under Schuldschein format: 23.0%</p>					

Note that 2.5-year ZC issues on 6 January 2016, 27 January 2016 and 1 June 2016 for respectively €100.0 million, €80.0 million and €120.0 million all have negative real interest rates. It should be noted that, in accordance with the opinion of the Community Treasury Council in October 2015, a temporary widening of the margin with respect to OLO was permitted as long as rates remained historically low; and that the impact of the ECB's Quantitative Easing Program (QE) on the OLO reference rate remained significant; and that FWB securities remained ineligible for the same QE in law (regulatory issue) or in fact (liquidity issue). These three conditions were verified until the end of the 3rd quarter of 2016.

As we saw in point B.1, the share of direct bank loans has declined steadily in recent years, representing only 2.5% in the FWB's debt portfolio as at 31 December 2017. This trend reflects the evolution in financial markets that have marked investor's preferences for dematerialized securities and thus requiring a lower return compared to direct loans. In 2016, exchanges were initiated with the European Investment Bank and this led to a loan agreement, on 6 December 2016, for an amount of €600.0 million²⁵, which will make it possible to realize an investment program worth more than €1,300 million that will be spread over 5 years in the sectors of education, research, sports, culture, aid to youth. These investment projects were already included in the Federation's plans and budget projections that take into account the needs linked to the population boom. This contract allows the FWB to have a new source of financing at attractive conditions.

As was stated in the media on 6 December 2016: "... the EIB is now able to propose to the Federation Wallonia-Brussels the largest financial operation ever carried out in Belgium. (...) The EIB, rated "AAA" and therefore able to finance itself at the lowest market rates, will offer the FWB, in order to support its educational, cultural, sports and research investment program, even more advantageous rates than those already available to it thanks to its good credit rating and proactive debt management. "

²⁵ See the 2016 annual report for the principal practical modalities of the potential draws

As announced in the beginning of the year in the document "Financing and strategy 2017", the gross financing requirement for 2017 consisted of maturing borrowings for the amount of €675 million (to which could be added an additional callable €300 million) and of the budget imbalance [= income – charges without under-utilisation of credits], estimated in the initial budget to be €-425 million. It was thus a total amount of at least €1,100 million and at most €1,400 million that the FWB would have borrowed **in 2017**, not including pre-financing realised in 2016 (initial estimation of €170 million) and without taking into account the evolution of macroeconomic factors, and thus not the adjustment of said budget for 2017.

The financing of previously mentioned gross requirements were realised through 16 EMTN issuances (€655 million) and of two Schuldschein issuances (€101 million) completed in the end of the year through the reactivation of three and six month credit lines totalling €188 million. See table below for more information:

Total amount financed long-term in 2017: €943.7 million
Weighted average rate after eventual hedging: 1.0%
Weighted average maturity: 19.7 years
Weighted average margin compared to OLO: 23.1bp

Part financed at fixed rate after possible IRS : 97.9%
Part financed under EMTN format: 69.4%
Part financed under CP & EMTN format: 19.9%
Part financed under Schuldschein format: 10.7%

Remarks

No taking into account the short-term CP lines, the principal characteristics become:
Total amount financed long-term in 2017: €755.7 million
Weighted average rate after eventual hedging: 1.4%
Weighted average maturity: 24.5 years
Weighted average margin compared to OLO: 23.9bp

The 2017 financing (not including CP) were underwritten primarily by German (56%) and Belgian (23%) investors, of which 78% were insurers.

The €20 million Inflation Linked issue on September 26th 2017, contrary to those concluded in 2012 and 2013, have a coupon linked to the European inflation used by the markets (HICP ex-Tobacco), notably by the Kingdom of Belgium when it issued its inflation-linked instruments. As per usual, the inflated capital is amortised year by year such that the reimbursed capital on July 25th 2038 will have been reconstituted during the length of the borrowing, as the FWB already do for three borrowings linked to inflation which were concluded in 2012 and 2013 for a total sum of €106 million. The realised operation is in accordance with the Community's Treasury council's proposed framework to limit the maximum proportion of its Inflation Linked borrowings to maximum 7.5% of the total outstanding long term borrowings.

The €80 million issue concluded on July 6th 2017 is noteworthy due to its duration which largely exceeds the mythical 50 years, but also and essentially because the investors who accept to lend at very long maturities show strong confidence towards the borrower. This was the case also for the €20 million borrowing with 50 years maturity concluded on June 22nd 2017. In addition, the rate of the issuance is largely below the "average cost" of debt and also resulted in an increase of the community's debt duration, perfectly coherent with a low-rate environment.

The gross financing requirement for the year **2018** was composed of maturing loans for the amount of €576.0 million, to which €488.0 million could be added if options are exercised, and of the deficit which was estimated at € 364 million during the preparation of the initial budget. Thus, it is a total amount of the order of minimum € 940.0 million and maximum €1,428.0 million that the FWB had to borrow in 2018, without taking into account the amounts pre-financed in 2017 and without prejudice to the evolution of the macroeconomic parameters and therefore the adjustment of the 2018 budget.

This need was covered by 46 loans:

Total amount financed long-term in 2018 (yc CP): €1,392.14 million
 Weighted average rate after eventual hedging: 1.4%
 Weighted average maturity: 20.9 years
 Weighted average margin compared to OLO: 19.5bp

Part financed at fixed rate after possible IRS : 75.4%
 Part financed under EMTN format: 75.4%
 Part financed under Schuldschein format: 11.7%
 Part finance by bank loans: 9.3%
 Part financed under CP & short term EMTN format: 3.6%

Remark

No taking into account the short-term CP lines (50 million), the principal characteristics become:
 Total amount financed long-term in 2017: €1,342.14 million
 Weighted average rate after eventual hedging: 1.5%
 Weighted average maturity: 21.7 years
 Weighted average margin compared to OLO: 19.5bp
 Weighted average margin compared to MidSwap: 19.1bp

The 2018 funding was characterized by its very broad distribution and by the predominance of German investors who financed more than 67% of the year's needs.

Note also the thirteen inflation-indexed issues which, in addition to the last one carried out in December 2018 but with the date of payment of the funds in January 2019, complete the maximum borrowing percentage in this format (7.5% of total debt stock) advocated by the Community Treasury Board and the implementation of the contract with the European Investment Bank, signed in 2016, which was achieved by a first draw of € 130.0m for a maturity of 9 years.

Finally, a rating downgrade was announced by the rating agency Moody's in the Credit Opinion of the December 10, 2020. The FWB rating went from Aa3/p1 to **A1/P1**. Moody's decided to downgrade the rating because of the growing financial deficit which involves a growing debt amount and because of the lack of budget flexibility that limits the reactions in case of market frictions. Moody's also confirmed the close financial ties between the FWB and the federal State by emphasizing the mature legislative and robust context. Moreover, it puts emphasize on the well-defined responsibilities of the FWB as well as on its credit quality based on its active and sophisticated financial management and its wide-ranging and flexible access to sources of financing. The long-term perspective, which has been downgraded from stable to negative on June 5, 2020, has been maintained during the Credit Opinion in December.

The development over time of the FWB's rating since its debut rating in April 2003 can be presented as follows:

- first rating: Aa1/P1- outlook stable;
- 15 December 2006: Aa1/P1- outlook positive;
- 15 January 2009: Aa1/P1- outlook stable;
- 10 October 2011: Aa1/P1- review for downgrade;
- 20 December 2011: Aa3/P1- outlook negative;
- 13 March 2014: Aa3/P1- outlook stable;
- 5 June 2020: aa3/P1 – outlook negative;
- 10 December 2020: A1/P1 – outlook negative.

It thus appears that every time the federal State's rating changes, the FWB's rating changes as well, in the same direction and by the same proportion. This clearly serves to confirm the equation: FWB Risk = Federal Risk minus liquidity.

For the year of 2019, €1,076.4 million was borrowed, with the use of 34 loans:

The 2020 financing has been characterized by the impact of the Covid-19 crisis and the downgrading (from Aa3 to A1) of the FWB rating (negative perspective) by the rating agency Moody's which was announced in its Credit Opinion on December 10, 2020. The initial estimation of the total amount to finance in 2020 was €1,340 million (excluding Lobo).

The Covid-19 crisis led to a deep economic crisis which heavily impacted the public finances, including those of FWB. The impact on the level of expenses was rather low (around €240 million) but the FWB experienced an unprecedented decrease of its revenues given the historical decrease of the national GDP. The growth of the GDP was estimated at -10.6% by the Federal Office of Plan in June 2020 while being reassessed at -7.6% in September. Finally, the net impact of the crisis on the FWB revenues was assessed at € -1,000 million.

The Government decided to issue loans to tackle the loss in revenues. Consequently, the financing needs of the FWB considerably increased during the year to reach more than € 2.0 billion.

Given those urgent needs, the Debt Agency launched a consultation to gather a bank consortium to lead a Public Benchmark type emission as was done in 2011. The consortium gathered Belfius, NatWest Market, Deutsche Bank and Morgan Stanley. The latter was appointed to support the FWB in the benchmark realizations up to end of 2022.

After a communication campaign towards investors, the FWB issued a benchmark on November 19, 2020. It amounts to € 600 million at a rate of -0.196% with 8.5 years maturity. The initial amount to issue was €500 million. However, given the favourable evolution of the conditions of the spread (from OLO + 30bp to OLO + 26 bp) and the proposed total amount (up to € 1,400 million) during the creation of the book of order, it has been decided to borrow € 600.0 million. 48% of the 39 investors come from Germany and Austria.

In 2020, the FWB invested in private placements for an amount of €1,358.6 million as the FWB gives priority to it for its debt instruments. Here is a summary of the rhythm of the investment:

Format	Transaction	Start	Maturity	Notional	Rate Type

C.2.2. Cash

Up until 31 December 2009, the interest rate conditions applied to the Federation Wallonia-Brussels current account by its cashier were based on the Euribor 1 month (base 365) adjusted by an upward margin for the debtor rate and a downward margin for the creditor rate. These rates were subjected to a quarterly arithmetical average and were compared, with a view to carrying out arbitrage, with those of investments or issues on the spot market. A new Cashier Protocol, concluded after due and proper consultation of the market and signed on 17 November 2009, entered into force on 1 January 2010, pursuant to which the reference rate became the Euribor 1 week (base 360) and was subjected to a monthly arithmetical average. Since 1 January 2014 and the additional clause of 17 December 2013, if the reference rate has remained unchanged, i.e. the monthly arithmetical average of the Euribor 1 week (base 360), the spread attached to the debit in account has been reduced by 3.0bp and that relating to the credit in account increased by 5.0bp, accordingly improving the conditions in account applied to the Community, all zero-floored.

After being put into competition, a new Cashier protocol was awarded in September 2018 for a period as from January 1, 2019 until December 31, 2023. The conditions for the access to a permanent short-term liquidity line of € 2,500.0 million are reaffirmed in this new protocol, as is the floor at 0% for credit and debit account positions. The rate applied to the credit balances is equal to the quarterly arithmetic average of the 1-month Euribor minus a margin of 5.0bp and increased by 10.0bp for the debit balance. As a result, the conditions in account couldn't be negative in any case.

Management of the deficits and surpluses is decided on in the light of the arbitrage principle "conditions in account vs. spot market conditions" and is conducted for the former by means of the short-term commercial paper programmes and for the latter through investments in State paper, the latter, it is recalled, being non-deducted.

The management of the variances between the commercial paper rates, the current account creditor and debtor rates, and the rate applicable to investment in federal State or federated entity treasury bonds has made it possible to appreciably reduce the cash financing cost.

* Management of deficits

For issues carried out on the commercial paper programmes, the Federation benefits from conditions allowing it to finance itself from the day to the year, as a rule at levels close to the interbank rate (Euribor) when market conditions so permit. This explains why it is generally more attractive for the FWB to finance itself in the short term by means of commercial paper issues than through a debit in current account.

Thus, in 2011 twenty-two issues had been carried through for a total amount of €1,979.8 million at a weighted average rate of 1.12% for a weighted average maturity of 11.5 days, for the most part (93.4%) effected during the first six months of the year. By way of a reminder, the €30.0 million issue carried out in December 2011 in EMTN format was concluded not for cash needs in the strict sense of the term, but by way of "pre-financing" of revenues from the European Funds that were expected at the beginning of 2012. On the other hand, in 2012, given the relatively favourable cash situation, only seven issues for a total amount of €930.0 million were carried out, mainly in the second quarter, at a weighted average rate of 0.26% and a weighted average maturity of 6.3 days. During 2013, and solely in the first six months of the year, a total amount of €1,149.0 million was raised by means of 15 issues concluded at 6.1 days and at 0.18% (weighted average figures). In 2014, a total amount of €2,246.0 million was borrowed in the period from March to August, via 22 issues with a weighted average maturity of 9.1 days and at a weighted average rate of 0.23%.

In 2015, one can note that the first 8 issues, concluded during the first 4 months of the year, have been carried out at positive rates ranging from 0.020% to 0.106%. The 11 issues concluded in the second part of the year have been carried out at negative or zero rates ranging from -0.05% to 0%. The conditions at the end of year were such that the FWB could not conclude short-term issues during the months of November and December 2015.

The trend towards the end of 2015 was continued and was accentuated the following year: consequently, no short-term issue could be concluded in 2016, especially since the Community treasury had an account surplus. In the end of July 2017, a Treasury note issue of €150 million could be realised at a negative rate over four days.

At the end of the year 2018, a commercial paper issue for cash was made in favour of the Fonds Écureuil for an amount of €124.2 million for the period from 28/12/2018 to 07/01/2019, at the rate of 0%.

In 2019, no Treasury note issues have taken place.

In 2020, two Treasury notes have been issued for a total amount of € 160 million at a negative rate of -0.43%.

The table below presents a summary overview of Treasury note issues (including any fixed term advances) concluded in recent years:

Year	Number	Average amount in € million	Weighted average rate	Weighted average maturity	Total amount in € million
2005	38	44.1	2.05%	14.2 days	1,674.0
2006	84	30.6	2.74%	14.6 days	2,572.4
2007	86	39.5	3.88%	13.2 days	3,400.4
2008	81	39.0	4.04%	10.1 days	3,161.6
2009	39	61.6	0.97%	8.8 days	2,403.0
2010	7	87.4	0.51%	8.3 days	612.0
2011	22	90.0	1.12%	11.5 days	1,979.8
2012	7	132.9	0.26%	6.3 days	930.0
2013	15	76.6	0.18%	6.1 days	1,149.0
2014	22	111.2	0.23%	9.1 days	2,246.0
2015	19	136.7	0.02%	3.4 days	2,597.0
2016	0	n/a	n/a	n/a	n/a
2017	1	150.00	-0.05%	4.0 days	150.0
2018	1	124.2	0.00%	10.0 days	124.2
2019	0	0	0	0	0
2020	2	80.0	-0.43%	10.4 days	160.0

* Management of surpluses

As explained above, the FWB is exempted from paying an advance levy on income that is derived from treasury bonds issued by the Belgian federal State or the federated entities. For this reason, when cash surplus is available, it is primarily in such type of papers that the FWB invests available liquidity.

The quarterly balance of the current account, when it is positive, does not however benefit from such exemption. Income generated by the current account is subject to an advance levy of 27% since 01/01/2016²⁶ (this increase of the levy is part of the "tax-shift" decided by the federal government) and was 30% starting from the 1st January 2017. Also, subject to market appetite, any credit balance is systematically invested with the non-discounted product as long as the interest that can be obtained by such an investment is not lower than the interest resulting from the current account.

²⁶ The evolution of the levy has been the following: 15% until 31/12/2011; 21% until 31/12/2012; 25% until 31/12/2015; 27% as from 01/01/2016 and 30% as from 01/01/2017.

The table below presents a summary breakdown of the investments (including any fixed term deposits) that have been made in the last few years:

Year	Number	Average amounts in € million	Weighted average rate	Weighted average maturity	Total amount in € million
2005	35	100.5	2.0%	5.0 days	3,517.0
2006	6	98.3	2.4%	4.4 days	589.6
2007	4	50.8	3.9%	6.1 days	203.0
2008	12	53.3	4.2%	8.6 days	640.0
2009	16	36.6	0.4%	27.0 days	586.0
2010	10	31.0	0.6%	27.7 days	310.2
2011	28	29.4	1.3%	29.8 days	821.9
2012	9	30.1	0.4%	28.3 days	271.3
2013	24	41.2	0.2%	26.5 days	988.3
2014	0	0.0	0.0	0.0	0.0
2015	0	0.0	0.0	0.0	0.0
2016	0	0.0	0.0	0.0	0.0
2017	1	267.0	0.0%	4.0 days	267.0
2018	1	518.0	0.0%	10.0 days	518.0
2019	1	448.0	0.0%	4.0 days	448.0
2020	7	28.5	0.0%	30.7 days	199.7

The investments made in 2013 were concluded exclusively during the second half of the year with Belgian public entities (regions and cities for the year under review) and fixed term deposits with the cashier for a total amount of nearly 1,000 million euros at 26.5 days, the market conditions not allowing more to be made.

In 2016, as well as in 2014 and 2015, no investment could be made by the FWB given actual market conditions: only investments at a negative rate seemed possible, whereas the creditor rates were contractually floored at 0% in the Cashier Protocol of the Community entity. In the framework of European rules applicable for public entities, the credit balance of the treasury does not result in a reduction of the debt. Following contacts with the Federal, as part of the exchange during the Treasury council meeting on November 27th 2017, it appears that the short-term deposits made by the Federal debt agency consist of a borrowing from the Federal and is thus subject to the consolidation framework. Furthermore, the borrowing rate of the Federal for this kind of operation during this time of year is 0%, equalling our creditor rate floored at 0%. The situation is in other words neutral for CFB in terms of financial impact, but is improved in the view of the CFB's debt and thus the Kingdom's, which is appreciated in terms of federal loyalty. Thus, based on the community treasury's projections in December 2017, a four-day investment of €267 million was realised at the national Treasury. Similarly, since the Community's cash assets were estimated at €518.0 million at the end of 2018 and €448.0 million at the end of 2019, the latter

amounts could be placed with the Treasury for, respectively 10 days and 4 days at a rate of 0% as part of the consolidation.

* Cash cycle

In the context of active cash management, it is interesting to isolate the annual cash cycle. This enables an analysis to be made of the evolution of the overall daily statement of all the accounts included in the amalgamation and to determine divergences in the rates of collection of revenues and disbursement of expenditures, monthly and annually.

The prevailing tone of the cash curve is the result of the fact that the French Community's major expenses are for the most part incurred at the end of the month, whilst the bulk of its revenues are collected at the beginning of the corresponding period. We thus observe an oscillatory phenomenon that is rather creditor at the beginning of the month and rather debtor at the end of the month. This wave pattern in the month is accompanied by a general downward trend in cash flow during the first half of the year and an upward trend in the second half of the year. This can be explained by the fact that the FWB often strives to pay the majority of its grants and subsidies to beneficiaries as quickly as possible in the fiscal year.

As an example the following graph shows, for a typical²⁷ reference year:

- The "global statement", i.e. the cash position resulting from the merger of all the accounts of the French Community. This includes the various management transactions (investments and cash borrowings);
- The "real situation", i.e. the cash cycle excluding short-term investments and borrowings.

²⁷ In this case, 2014, that is to say before the appearance of negative rates and, above all, before their "full" impact, notably on treasury operations.

FIGURE 9
Typical Cash cycle (for the year 2014)

An examination of this figure reveals regular movements, although these are more volatile in the first six-month period, with movements in the second half of the year being of a more regular appearance. This distortion chiefly stems from the gap between the moment when debt redemptions are paid and the moment when they are re-borrowed.

In 2011, the cash pattern was influenced by the conclusion of the benchmark loan, which made it possible to refinance in one go those redemptions carried out before and after the starting date of the €500.0 million issue. Conversely, in 2012, the financing of the FWB'S gross requirements (redemption payments and budgetary balance) started very early on in the year²⁸; the debits in account were thus reduced, as was cash movement volatility. This trend was accentuated in 2013: gross borrowing requirements were totally covered by May/June. On 18 March 2014, the FWB paid off its inaugural issue of €300.0 million which had been concluded in 2004: the curve was in a fairly marked diminishing phase up until that date, all the more so since only two issues for a total amount of €52.0 million had been issued in this period. The graph then very quickly initiates a phase of accelerated growth, since at the end of April / beginning of May 2014 seven new loans representing a total amount of €238.5 million were entered into, thereby covering all the year's requirements linked to the refinancing of matured loans.

²⁸ More than 55% of these gross requirements were covered in the first quarter of the year, seeing as the loans coming to maturity were mainly concentrated in March/April 2012.

In 2015, the evolution of the “overall statement” confirms the global cycle: a decrease in the first semester and an increase in the second semester accompanied by monthly movements (in general a credit position in the first 2 weeks of the month and a debit position in the second half of the month). That being said, as stated above, the FWB was unable to make investments during that year, thus reducing the usual gaps between “overall state” and “actual situation”.

In 2016, no treasury operations (borrowing or short-term investments) could be concluded and there is therefore no longer any distinction between “global state” and “real situation”, as depicted by the graph in the annual report from 2016. This situation prevailed also in 2017, with the exception of the €150 million issuance in the end of July for four days, as well as the four-day investment in the end of December 2017 of €267 million.

At the end of 2018, the issue of € 124.2 million and the investment of € 518.0 million mentioned above coincided, generating a net difference of € 393.8 million for 10 days between “overall state” and “actual situation”.

Another peculiarity of this cash cycle is that large amounts were raised on the financial markets early in the year. The estimated initial gross financing requirements were fully covered in mid-June 2016 despite a complicated economic and financial environment characterised by, among other things, little growth, inflation, low interest rates, even negative on the short term (all Euribor rates) and on the long term for financially robust countries (OLOs sometimes up to 8 years, Bund sometimes up to 10 years, etc.). This economic-financial complexity has been accentuated during the following year by political turmoil, which did not hinder the FWB from covering three quarters of its gross financing needs in the first half of 2017. The financing of the 2018 requirements started very early with the conclusion of 20 loans during the months of January and February covering all the depreciations. The prepayments of the short-term lines had not yet been decided at this time. As a result, the balance of the Community’s cash position was - within a few days - credited for the whole of 2016 as well as throughout 2017 and almost all of 2018²⁹; which was not financially embarrassing given the contractual non-negativity of the account rates.

The financing need of 2019 were more spread out compared to the needs of previous years. During the first semester, the position of the Community was regularly debited at the end of the month.

The Treasury position has been mostly credited in 2020, particularly in the beginning of the year. The financing needs in 2020 started with a prefinancing in 2019 of € 324.0 million and continued during the first two months of the year before being stopped by the Covid crisis. The remaining financing has been realized as from August 2020.

²⁹ Except a debit balance of €106 million found on 31/01/2018, and the debit balance in account of €18 million, which prevailed from 28/12/2018 until the payment on January 2 of the 1st twelfth of the year 2019 by the federal state.

FIGURE 10
Cash flow for the year 2020

C.3. Interest rate curve in 2020

FIGURE 11
Evolution of the Euribor and IRS interest rate curves in 2020³⁰

The short-term interest rate, Euribor (i.e. rate whose maturity is below or equal to 1 year), experienced on average a decrease of 17 bp during the first year given the Covid-19 pandemic since March 2020 and its impact on the European Economy. It leads the curve to more negative rates. The long-term portion of the curve (i.e. rate whose maturity is longer than 1 year) experienced a decrease close to 32 bp on average during the same period.

The graph that gives the evolution of the Euribor and IRS curves in 2020 seems to show that this decrease happened in two phases. In the first phase, despite the heavy decrease of the rates observed since the end of 2018, a slight steepening of the curve can be observed in the short term during the first term of 2020. This increase led to the inversion of the curve. The gap between 6M Euribor and 2-y IRS went from 3 bp in January 2020 to -7bp at the end of June 2020. The long-term section of the curve pursued its decrease that started in 2019. This led to a flattening of the long section of the curve. The long-term rate recorded a drop of around -21 bp during the first semester. During the second semester, a parallel shift of the curve can be observed. The rates are reaching -13 bp on average for all maturities.

In March 2020, the ECB announced the implementation of the “Pandemic Emergency Purchase Programme”³¹ (PEPP) initially amounting to € 750 billion. This programme has been strengthened on 4 June 2020 by adding € 600 billion to the initial amount (leading to a total amount of €1,350 billion). The asset categories that are included in this program are those allowed by the existing Asset Purchasing programme (APP). All the purchases regarding this programme were done before the end of 2020. The ECB also kept its refinancing rate at a historically low level of -0.50%.

³⁰ Source: Thomson Reuters Eikon

³¹ The Governor Council decided on 18 March to launch a new temporary programme that focuses on the purchasing of obligation from the private and public sectors. It aim to tackle the significant risk for the transmission mechanism of the monetary policy and the perspective of the Euro zone shaped by the Covid-19 outbreak (Source : NBB)

The general trend regarding the Euribor was a decreasing rate despite the high level of rates observed at the end of 2019. Thus, the 1-month Euribor decreased of around 12 bp (-0.44% early 2020, -0.55% at the end of the year). The 3-month followed suit and lost 17 bp to end up at a level close to -0.56% at the end of the year. The 6-month and 12-month Euribor also followed suit and ended up the year at -0.53% and -0.50% respectively (-0.32% and -0.25% at the beginning of the year initially).

Until its 2009 edition, relating to 2008 figures, the Debt Report of the Wallonia-Brussels Federation was limited to presenting an analysis of the yield curve based on the evolution of the Euribor and the IRS. This analysis made it possible to apprehend the evolution of the rates which were then those of reference for the Community financing.

Since 2009, the evolution of the OLO - IRS spread has been such that the analysis of the yield curve, which makes it possible to make a decision about the positioning of the debt in terms of the fixed rate / floating rate or duration ratio, is also linked to the evolution of the Euribor - OLO curve, corrected for the spread between OLO and FWB issuance.

FIGURE 12
Evolution of the IRS and OLO interest rate curves in 2020

With regard to the general evolution of the OLO curve during the year 2020, a general downward trend took place. The rates with a maturity beyond 3 years recorded an average drop around 37 bp while the rates with a maturity below 3 years experienced an average decrease of 7 bp for the year.

The trend of the OLO curve to be below the IRS curve was, again, confirmed during 2020. The OLO / IRS spread³² remained negative (but stable) for maturities of 1 to 3 years throughout 2020. This spread was on average of -11bp at December 31, 2020 for maturities of less than 3 years, compared to -27bp at the beginning of the year. For maturities greater than 3 years, the spread was around -18bp at the end of the year, compared to -17bp at the beginning of the year.

The context of low rates, or even negative rates, for short maturities but also for longer maturities, has reinforced the FWB in the application of its principle of maintaining the variable rate portion below the 15% threshold, as decided by the Minister of Budget and Finance based on the proposal of the Treasury Board. The fixed rate / floating rate + fixed rate portion, which serves as a tool for measuring and managing overall interest rate risk exposure, has remained very stable. The rate stood at 87.5% at the end of 2019 and stood at 88.7% on December 31, 2019.

C.4. Debt management tools

The Debt Agency uses a number of measuring instruments designed to appraise the level of risk of its debt portfolio.

Since the year 2000, the usual parameters of “average life term”³³ and “implicit rate” have been supplemented by those of “duration” and “internal rate of return”.

The results on 31 December of these two parameters have evolved as follows the past years:

Year	2015	2016	2017	2018	2019	2020
Residual term in liquidity (years)	9.12	10.25	11.84	14.45	17.42	16.62
Implied rate	3.03%	2.71%	2.62%	2.26%	2.29%	1.85%

³² The OLO/IRS spread for a given maturity is computed as follow : OLO/IRS spread= OLO rate – IRS spread for the same maturity

³³ To be more precise, this concerns the indicators of “residual term in liquidity” and “residual term in rate”.

FIGURE 13
Evolution of the implicit rate, 1996 – 2020

The movement in the implicit rate from one year to the next results from the level of interest rates and curve rate movements enabling a dynamic management of the debt, but also from the level of the debt stock. Since the majority of the Federation Wallonia-Brussels new issues are ultimately expressed as a fixed rate, the implicit rate measured during the budget year (n) makes reference, for that which concerns them, to operations concluded during the financial year (n-1). These results in terms of rates are thus to be linked to the duration and average term reducing the liquidity and refinancing risk, as well as to the decision to position the fixed/floating ratio mainly at a fixed rate, such that the FWB's debt not only is not very costly, but above all is of a low-risk character in terms of rates and in terms of refinancing.

C.5. Repayment schedule

Another of the Federation Wallonia-Brussels objectives as regards the debt is to "smooth out" debt redemptions as far as possible, in order to obviate any liquidity shortages on the market. The aim in particular is to avoid refinancing peaks. It should be noted that in the representation given below and in order not to overload the graph, it is assumed that the Lobo of €75.0 million matures in 2020 while the possible maturity dates are 2019, 2020 ... or 2058, the principle of prudence being choosing the least favourable option. The "optional amortization" for the year 2020 comprises the Lobo and two short-term loans (6 months) amounting to €175.0 million.

As a reminder; the objective of smoothing is since a few years formalised by two supplementary management criteria, which consist of prohibiting a twelve month refinancing risk of over 20%, and of imposing a limit of maximum 50% of the total borrowings maturing within five years.

These two ratios have been reviewed during the Treasury Council in December 2020. The decision was to limit the 1-year refinancing risk to 10% and to 33% the 5-year maturity loans. See table below for the evolution of these ratios during the past years:

Year	12 month refinancing risk	5 year refinancing risk
2013	6.2%	47.0%
2014	7.8%	42.9%
2015	15.0% → 17.4%	46.1% → 48.4%
2016	15.9%	43.1%
2017	16.6%	39.1%
2018	10.1%	26.5%
2019	7.9%	21.9%
2020	5.5%	19.2%

FIGURE 14
Redemptions as at 31/12/2020 (in € million)

Chapter IV

The FWB's debt in the framework of the European concept of consolidated gross debt (Maastricht concept)

For clarity and transparency purposes and also to give the reader comprehensive information, this section of the report also covers debt issued by entities (legal entities) distinct from the FWB but falling within the concept of consolidated gross debt (Maastricht concept) of the FWB's consolidation sphere.

It should be noted at the outset that the ICN¹ Act requires the National Bank of Belgium (NBB) and the National Accounts Institute (ICN) to use confidential individual data only for the purpose of compiling statistics² for which they are collected and are not transmitted to third parties except in extraordinary cases defined by law and, in exceptional cases, to Eurostat itself in the upmost secrecy. Detailed information about the consolidated gross debt (Maastricht concept) of the FWB perimeter cannot therefore be disseminated in this report.

The FWB is not responsible for the totality of the debt included in the concept of consolidated gross debt (Maastricht concept) of the FWB's consolidation sphere. To avoid any confusion, it is therefore a good idea to clarify the difference between the FWB's total consolidated Community debt presented in detail in this report, and the consolidated gross debt (Maastricht concept) of the FWB's consolidation sphere.

The difference between the two concepts stems from the inclusion in the concept of consolidated gross debt (Maastricht concept) of the FWB's consolidation sphere, of debt issued and managed under the responsibility, for those holding it, of companies consolidated with the FWB in the public administrations sector.

The list above can be downloaded on the following page: [WFE Wallonia Brussels Federation](#).

The complete list of economic units entitled "List of public units active in 2017" and delineating the perimeter of the public sector and the general government sector (S13) on which the statistics of public government accounts are pulled, in the framework of the preparation of the national accounts and of the notification to Eurostat of the data used for the excessive deficit procedure since May 2016 can be found at the following address: <http://inr-icn.fgov.be/fr/publications/comptes-nationaux-et-regionaux> and is updated twice a year. The figures below are those relating to and extracted from the entities on the list published on April 2019. The aforementioned list is repeated - in another presentation, but identical in content (updated in October 2018) - by the Financial Information Unit for the Walloon Government and the Government of the Wallonia-Brussels Federation (CIF), and available on: [WFE Wallonia Brussels Federation](#)

1 The National Accounts Institute (ICN) was established by the Act of 21 December 1994, Title VIII, on social and other provisions for the reform of the Federal Statistical System and Economic Forecast by the law of 8 March 2009 (published on 30 April 2009) and by the law of 28 February 2014 (published on 4 April 2014).

2 See also Article 20 of Regulation (EC) No 223/2009 on European Statistics, which defines the statistical framework applicable to all European statistics and in which statistics on the EDP (excessive deficit procedure) are to be established.

The website of the National Bank of Belgium's (NBB) Institute of National Accounts (ICN) presents a debt stock for the FWB and all the entities enumerated on the list of companies consolidated with the FWB (i.e. the concept of gross consolidated debt (Maastricht concept) of the FWB's consolidation sphere), which is worked out as follows for the period 2016-2020:

French Community of Belgium (EUR million, end of year outstanding amounts)					
Source http://stat.nbb.be/ – April 2021					
	2016	2017	2018	2019	2020
Gross consolidated debt (concept of Maastricht) [1]	7,333.4	7,596.8	8,099.6	8,475.8	9,879.3
Detention by entities in the perimeter of the French Community of debt issued by the FWB S1312 [2]	146.5	145.4	139.9 ³	14.2	12.8
Detention by the French Community (including entities in the perimeter) of debt issued by other entities of the S13 sector [3]	84.3	319.3	571.4 ⁴	493.4	35.2
Gross consolidated debt for S1312 [4] = [1] – [2]	7,186.9	7,451.4	7,959.5	8,461.6	9,866.6
Contribution of the FWB to the Maastricht debt [5] = [4] – [3]	7,102.6	7,132.1	7,388.1	7,968.2	9,831.3

By calculating the difference between the figures for the FWB's total contribution to the Maastricht debt supplied by the ICN and the figures for the consolidated Community debt excluding the FWB's cash balances presented in detail in this report, we can estimate the contribution made by the entities falling within the FWB's consolidation sphere to Belgium's Maastricht debt. This is as follows:

French Community of Belgium (EUR million, end of year outstanding amounts)					
	2016	2017	2018	2019	2020
Contribution of FWB perimeter to Maastricht debt	1,195.2	1,183.4	1,188.3	1,226.0	1,142.2

Some figures presented in the two tables above differ from those mentioned in the 2015, 2016, 2017 and 2018 reports because of the reclassification by the ICN of certain new entities in the FWB's consolidation sphere, and because of the recalculation of some contributions, notably in April 2020, partly using a new methodology: more precisely, in this case, it is an update of the financial leasing data used in the calculation of the indirect debt.

3 Including 124 million FWB debt held by the Fonds écoreuil.

4 Of which 518 million placed by the FWB to the Federal.

The bringing to the fore of these two different concepts elicits a number of comments.

- 1) The contribution made by the entities in the FWB's consolidation sphere to the Maastricht debt is heavily linked to the evolution of the list of companies consolidated with the FWB in the public administrations sector. So if an entity holding debt is included in (removed from) this list, the amount of the contribution of the entities in the FWB's consolidation sphere to the Maastricht debt may increase (decrease), even though no debt has been taken up (repaid).
- 2) All the ratios, indicators and analyses appearing in this report concern only the consolidated Community debt at FWB level, and not the consolidated gross debt (Maastricht concept) of the FWB's consolidation sphere. Thus, for example, the Debt/Revenues ratio (in %) presented in this report and amounting to 88.9% at the end of 2020, compares the consolidated Community debt at FWB level with the revenues received by the Ministry of the FWB only. The calculation of a similar ratio, but in respect of the consolidated gross debt (Maastricht concept) of the FWB's consolidation sphere should take into account in the denominator the revenues of all the consolidated entities enumerated in the above list. For information purposes, in the accounts of the Public Administrations for 2020, the ICN includes the following total revenues for the FWB:

French Community of Belgium (EUR million, end of year outstanding amounts)					
	2016	2017	2018	2019	2020
Total revenue	18,688.0	19,280.4	19,753.9	20,207.9	19,241.6

Source : <https://stat.nbb.be/>- April 2021

So in terms of Debt/Revenues ratio, the evolution would be as follows:

French Community of Belgium (EUR million, outstanding end of year amounts)					
Ratios in %					
	2016	2017	2018	2019	2020
Contribution of the FWB to the Maastricht debt	7,102.6	7,132.1	7,388.3	7,968.2	9,831.3
Total revenue	18,688.0	19,280.4	19,753.9	20,207.9	19,241.6
Debt/revenue ratio	38.0%	37.0%	37.4%	39.4%	51.1%
See 2015, 2016, 2017, 2018 Annual Reports					
Debt/revenue ratio (outside consolidation)	58.4%	60.3%	61.3%	65.2%	88.9%

(3) As Maastricht debt is a gross debt, assets held, if they are not in the form of securities of an entity of S13, are not deducted. Consequently, the Maastricht debt of the FWB at the end of 2016 does not include cash of € +367.3 million, nor is the €30.5 million credit balance on December 31st 2017 taken into account. However, the €267 million placement with the federal Treasury is taken into account and is a part of the consolidation. On the other hand, the debit balance of € 18.3 million measured at 31/12/2018 is well taken into account; as is the case with the cash issue of € 124.2 million and the cash investment of € 518.0 million made with the Federal Treasury, even if the latter two transactions are presented separately by the ICN. This practice stayed the same in 2019: the credit balance of € 4.5 million closed on December 31, 2019 will not be taken into account for the Maastricht debt; while the net investment in the Federal Treasury of € 319.4 million is effectively deducted.

When reading this chapter, the reader will realise that when talking about the FWB's debt, at least two amounts can exist, each one correct insofar as what relates to it, but each representing different realities. It is therefore necessary to specify whether we want to ascertain:

- the debt representing the economic concept of the sum of amounts borrowed and managed by the FWB and the interest of which is payable by the FWB;
- or the debt representing the accounting concept of the contribution made by the FWB and all the companies consolidated with the FWB in the public administrations sector, to Belgium's consolidated gross debt (Maastricht concept).

BOND LOANS CONTRACTED BY THE FWB AS AT 31/12/2020
